

TABLE 1. LIMITS OF PURIFICATION OF NUCLEAR MATERIAL

Category	Material	Limit	Notes
1. Concentrators	Uranium enriched to 10%	Less than 10 kg	
	Uranium enriched above natural, but not above 100%	Less than 10 kg	
2. Chemicals	Uranium enriched above natural	10 kg or more	
	Uranium enriched below natural	200 kg	
3. Enrichment	Uranium enriched above natural	Less than 2 kg but more than 500 g	
	Uranium enriched below natural	200 kg or more	
4. Irradiated Fuel	Depleted or natural uranium, thorium or low enriched fuel (less than 10% fissile content)	10 kg on barge	
	Uranium enriched to 10% or more	10 kg on barge	
5. Material not irradiated in a reactor	Uranium enriched above natural	200 kg less than 10% but falling in Category III should be more than 5 kg	
	Uranium enriched below natural	200 kg or more	
6. Fuel	Uranium enriched above natural	100 g	
	Uranium enriched below natural	1 kg or more	

NOTE: Category III material may be used in Category I or II reactors if the enrichment is less than 10%.
