

ARE you really saving money by neglecting to re-string that barn roof? You know that each additional patch lessens the value of your building. You know each winking leak means rotting decay. You know that only by replacing your roof can you get a building free from rot and rot. Pollard's "Good" Shingles being the best of steel at a price, when I, a shingle roofer, a Pollard's roof will last for generations, saving you at all times from the danger of lightning "red" roofs. The "Right Roof" Booklet, F.D., telling you all about steel shingles and how to lay them, is free. Write today.

GREAT DISCOVERY!
Remarkable Cloth that won't wear out or tear! Samples free by post to any reader.

Just fancy, readers! Whether a blacksmith, carpenter, millwright, farmer or clerk, could you by solid hard work, grinding wear, every day in the week, not just Sundays—wear a small hole in a \$2.50 pair of Pants or a \$4.50 Suit in six months? Could any of you boys wear a small hole in a \$2.37 Suit in six months? Domestic, six months of solid grinding wear and tear—not just Sundays—but every weekday and Sundays too! If any reader can do this, he can get another garment free of charge! A remarkable new untearable cloth has been discovered by a well-known firm in London, England. These new Holeproof clothes are amazing. They can't tear, no matter how hard you try. Yet, in appearance, they are exactly as finest tweeds and serge sold at \$30. But the price is only \$2.50 for a pair of Trousers, \$2.37 for a pair of well-made, smart, stylish four-piece suits, delivered by post, with no extra charge whatever, \$4.50 only. Boys' Suits from \$1.27. Knickerbockers from \$1.00. Readers are reminded that the above sums cover cost of postage and all charges, and there is nothing more to be paid on delivery. Full particulars of these remarkable clothes, together with a large catalogue of patterns, fashions, and a simple measure chart, with which readers can measure themselves at home, will be sent absolutely free and postage paid to (Agents Dept. 10), The Holeproof Clothing Co., P.O. Box 104, Toronto. The firm's London address is 85 St. Nicholas Road, London, W.C. Eng., but all applications for samples should be sent to Toronto, Ont.

When You Write—Mention Farm and Dairy

how many weeks or days in the year are some of these implements used, while a dish washer would be used over 1,000 times in a year? It really does not seem such an exorbitant price if the dish washer does efficient work.

Just the other day I read of a woman who invented a dish washer which is proving successful. She had a motor in the kitchen for running her washing machine, wringer and mangle and it occurred to her that it might wash her dishes also. This is how the system works:

For a pan she uses a long oval dish-pan like a baby's bath tub. It exactly fits the sink and has a stopper in the bottom to let the water in and out. A bar across the top has two "U" shaped twists in it, one of which is upside down. The end of this bar is in a wheel that carries a belt from the motor. This woman has three small wire baskets, like they use in the stores to carry parcels and the change. In these she gathers the dishes. She fills her dish pan from the hot water tap, adds a little soap powder and hangs a basket by a wire hook on each of the U twists of the bar across the pan. Then she starts the motor going, and the baskets are lifted up and down in the water as the rod turns. As she fills the third basket she takes off the first and seals it to drain, replacing it with the third basket. When the basket is drained she carries it to the cupboard to put away the dishes, and taking a towel, wipes any drops away that have not already dried.

Some people tell us that it is not the time spent in washing dishes, but the time spent in drying them that really counts up. We are told, too, that it is not sanitary to rub each piece of china with a dish towel which, in many cases is not very clean. Dish drainers are, therefore, gradually coming into popularity. Some of these consist of a square galvanized drain pan and a removable wire rack into which the dishes are placed, and which allows them to stand upright. The rack is of various sizes—large for plates, smaller for saucers, with loops on each side to hang cups. When the dishes are washed they are placed in the drainer, and sealed by pouring boiling water over them. Such a dish drainer should save considerable time, especially in the family where dishes are numerous. So, even if one could not afford a complete dish washing outfit, it seems to me a drainer would be quite an asset to the kitchen equipment.

What do you think, "Merry Margaret"? I too would like to hear from others on this subject, and would be glad also of practical information on the freless cooker.—Ann Flossie.

Selecting that New Rug

PERHAPS some of Our Folks are planning to buy that new rug for the parlor or one of the bedrooms this spring, and find it rather difficult to decide on a design or color that will harmonize with the other furnishings. The following hints are offered by the economics department of the University of Nebraska:

1. Do not choose a rug that is lighter in tone than the wall.
2. Choose one which is unobtrusive in color and design. Your furniture will look better than if you choose a rug of bright colors or of conspicuous design.
3. If you have furniture of various kinds, choose a rug of several colors. For example, if you have a mahogany piano case, an oak library table, and a gray-green reed rocker, a rug of old rose, gray-green, and tan will help to make each piece "belong."
4. If you are hesitating between two sizes of rugs, it is usually safer to take the smaller one, unless you object to bare floor.

GILLETT'S LYE

HAS NO EQUAL

It not only softens the water but doubles the cleansing power of soap, and makes everything sanitary and wholesome.

REFUSE SUBSTITUTES

DELCO-LIGHT

—you need not envy the city man his electricity now—

Have electricity on your farm. Delco-Light has brought this ideal to completion. Every farm can now have its own electric light and power plant at small cost—giving perfect service.

Easy to Operate—Economical—Safe

Delco-Light is a complete plant—gasoline motor, generator, storage batteries fully charged and ready to run. Once or twice a week you simply press a lever, starting the motor. The batteries are charged and when this is completed the motor stops automatically.

This wonderfully simple plant supplies light and power for the average farm for less than 5 cents a day. Delco-Light prices: No. 208, \$209; and No. 216, \$465.

Full Descriptive Literature FREE

You should all know about this great development in electricity. Write for full descriptive literature telling you all that Delco-Light does—how it works—how safe and economical it is. All sent free on request from any Canadian office.

C. H. Rooke, Limited
Delco-Light Distributor
160 BAY STREET, TORONTO

This means electric light for the house—and all the convenience of safe, clean, brilliant light. It means electric light for barns and outbuildings. It means power to pump water, run the separator, the churn, the washing machine.

It means doing away with half the present dryness of farm life. It means easier housework, easier chores. It means a healthier, happier family.

The greatest achievement of modern civilization—electricity—must surely be needed in every home. It is the organization selling Delco-Light, meeting with success everywhere.

Delco-Light was developed by the same company making the world-famous Delco starting, lighting and ignition plants for automobiles.
