Two nearest dams 20 lbs. butter 7 days, two grand-dams average 20 lbs. milk in one day. Write: Walburn Rivers, R.R. No. 5, Ingersoll, Ont.

Questions and Answers. Miscellaneous.

Man III.

I employed a man for one year; he was ill for six weeks. Should he expect to draw full pay? What would be a fair deal in this case?

F. F.

Ans.—Of course, if the man's illness was brought on through no fault of his employer he could not collect wages for time so lost. He would likely appreciate something for the time, however, and if he is a particularly good man would it not be advisable to allow him at least a part of his wages? A time like that which he has gone through makes severe demands upon the man or his family. It does not always pay to be too exacting. We cannot say how much the man should get. This depends entirely upon the man and his employer.

Well-drilling Queries.

I wrote you some time ago regarding an intermittent siphon system. The information I got from you was very valuable to me. At that time I was installing the system, but a well-driller came along and said it would not run intermittently. I was guided by him, and as the well was some distance from my house, from the point of inconvenience I decided to let him drill a well. After I got your answer I put the siphon in and, just as you said, it works to perfection. It is worth hundreds of dollars to me. As for the drilled well, I will now describe it: I was certain of getting water very close to the surface; in fact, it is there in abundance, but the driller, in order to fill his pocket, went down 72 feet, at \$2.50 per foot. He cased it only 32 feet, leaving 40 feet uncased. I never got any water out of this well that should be used in the house, although we used it at times, more for the sake of trying to satisfy ourselves that we were getting something for our expense than any real benefit it was to us. It was always muddy. We have had two lawsuits over it already, and he is threatening to appeal. He collected full pay from me in Division Court, and the next time I recovered \$125 damages in County Court. I would like to have you answer a few questions through "The Farmer's Advocate" regarding drilled wells.

1. The ground being a gravelly clay at top of well, and the balance blue clay, how far should this well be cased to assure satisfaction? There is no rock from top to bottom.
2. Can you get a spring in blue clay?
3. Would a driller be justified in not casing all the way in soil of this nature, because he had passed some smaller springs in order not to shut them off?
4. Is a driller justified in stopping when he comes to quicksand?
5. In this case, what should he do?
6. Is there anything that should justify him in not casing all the way to the spring at the bottom, excepting rock?

L. G. M.

Ans.—You are not very clear. You do not actually state whether the driller claims to have found springs in the clay and whether he found quicksand and water at the bottom, although you seem to imply that he did. With this understanding your questions might be answered as follows:

1. We think the well should be cased to the bottom of the blue clay.
2. Not very likely, though it may be possible.
3. We think not, though something would depend on the terms of your bargain with him.
- 4 and 5. This also would depend on the terms of your bargain.
6. We do not think so. W. H. D.

Opposite her in the trolley car was a man who was expectorating freely. Finally the woman hailed the conductor and asked: "Conductor, do you allow spitting in this car?" Taken aback for a moment by the unexpected question the conductor recovered himself and said: "Why, not exactly, but go ahead if you like, madam."

Renfrew Standard It starts without cranking

The Engine With the Dual Ignition

This means practically the elimination of delays or ties up from the ignition system of an engine. The Renfrew Standard system includes a High Tension (built-in) magneto and battery equipment. Each one works independent of the other. If the batteries get weak you can run on the magneto. If anything should happen to the magneto you can send it back to the factory, if necessary, for readjustment, and in the meantime use the batteries. The Renfrew is ALWAYS RELIABLE—an engine you can bank on when there is important work to do.

Write for catalog describing it fully. All sizes from 1 1-2 h.p. to 60 h.p.

We also furnish grain grinders, saw frames and B. Bell & Son ensilage cutters.

See our exhibit of Renfrew Standard engines, Renfrew scales, Standard cream separators, etc., at Toronto, London, Ottawa, Sherbrooke, Renfrew exhibitions and the smaller fall fairs.
