Hamilton, March 15 .- On Mill street, in an unpretentious barn, a Canada Cup challenger is being built. It will "Lord Fitzgerald, the British min- be named the Hamilton II. Just now the planking is well started, and Capt. face had resumed its expression of it will be ready for the water about mild curiosity.

I will be ready for the water about June 1. The designer, Mr. Johnston, a Hamilton man, has achieved some yachts. It is believed that he has designed a fast boat. She will be a fine. roomy yacht, with considerable speed. Work on the boat has been going on for some months, and so far both owners are entirely satisfied with the

Hamilton II. is 29.9 waterline, with an over all length of 50 feet 6 inches. For a 30-foot craft the overhangings are rather long, but it had to be done to get an easy entrance and counter, the rules make a deep mid-ship section necessary. Hamilton II. has as much head room as the 50-footer Gloria. With her cabin top she wiil have six feet head room. Her body s twice as deep as that of the celebrated Invader, although the waterline is practically the same. The new boat will be seven feet longer than her namesake Hamilton I. This would indicate that the boat will be much larger, comparatively speaking, than the predecessors of her class, but the new rules compel all the boats to be similarly built, except in length, which is unrestricted.

She will be timbered throughout with Indiana white oak, and is even above specifications in the matter of strength. The bolts of the four-ton slab of lead pallast sit on the floor frames, thus bringing the strain of the ballast well within the hull, instead of applying it simply to the keel. She is very strongly tied with white oak floors and iron bolts at every frame. The frames sail themselves are sawn from carefullyselected timber, and all spliced in the Midship section, 22.32 feet.

The Designer Is Mr. William same place, at the turn of the bilge. Double futtocks of white oak, one on either side of each frame, make the splice both strong and neat, and the whole will be clamped together by powerful bilge keelsons. Moreover, the frames are reinforced by steel plates running to the keel, at the main rigging, and three more amidships. The whole frame was put together without the use of a piece of iron. The designer has an ingenious way

dove-tailing the frames into the backbone, and with the cross tying of the floor frames, the boat has an excellent skeleton. She is being planked to the waterline with Michigan white pine, and above she will be planked with British Columbia cedar, specially seected. It is in 35-foot lengths. The rig will be a simple jib and mainsail, the latter being about 75 per cent of the whole area. She will spread the limit allowed, which is

only 1,550 square feet. Hamilton I. had a spread of 1,630 feet. The old Hamilton, which was a pretty fast ooat, was noted for her stiffness in a breeze, and the new one will, it is expected, be equally stiff, if not more She has a bigger body than the old boat with less sail. and has 4,000 pounds of lead to the old boat's 3,500. All of which should make her very stiff. To get the maximum of advantage out of this circumstance, the designer has given the new boat a symmetrical bilge. From deck to keel there s very little variation in the curve of her side. She should sail equally fast at any angle of keel. Her water-line is quite full forward, but she has a nice, clean entrance, and a smooth, clear run. She should be very easy in a sea-way, unless her overhangings slam down harder than is expected. The Hamilton II. will have hollow sparts and her bowsprit will be only

four feet outboard. The dimensions are: Waterline length, 29.9 feet. Over-all length, 50 feet 6 inches. Ballast, 2 tons. Draught (estimated), 6 feet 11%
