From the Weekly (Toronto) Matt, Aug. 24.
Perhaps the most extraordinary success that has
seen achieved in modern medicine has been attained by the Dixon treatment for catarrh. Out of two housand patients treated during the past six nths fully ninety per cent have been, cured of months fully ninety per cent have been cured of this stubborn malady. This is none the less startling when it is remembered that not dive per cent of patients presenting themselves to the regular practitioner are benefited, while the patent medicines and other advertised cures never record a cure at all. Starting with the claim now generally believed by the most scientific men that the disease is due to the presence of living parasites in the tissue, Mr. Dixon at once adapted his cure to their extermination—this accomplished, he claims the catarrh is practically cured and the permanency is unquestioned, as cures effected by his two years ago are cures still. No one cles has ever attempted to cure catarrh in this manner, and no other treatment has cures still. No one else has ever attempted to cure cutarrh in this manner, and no other treatment has ever cured catarrh. The application of the remedysis simple and can be done at home, and the present season of the year is the most favorable for a speedy and permanent cure, the majority of cases being cured at one treatment. Sufferers should correspond with Mr. A. H. Dixon, 305 and 307 King street west, Toronto, Canada, and enclose stamp for himself on catarrh

Baxter, M.D., M.R.C.P.S.N., Assistant Consulting Physician. Prof P. W. Stewart, Secretary Treasurer and General Correspondent.

All diseases of the respiratory organs treated by "Medicated Inhalations" combined with proper constitutional remedies for the blood, etc. Nearly 40,000 cases successfully treated during the past sixteen years.

The citizens of Toronto, as well as neighboring lake and inland cities, have observed the alarming prevalence and increase of that dangerous class of maladies known as throat and lung diseases. Year by year is adding to the army of victims, and new types and phases of these affections are also multiplying. The reports of the city undertakers will disclose to the inquirer a fearful bill of mortality from this cause alone; nor is the gloomy record relieved by a comparison of results in the oft-reported trial of the various prescriptions in common practice. The time-worn customs of bye-gone years, calomel, burning, leeching, morphine, iodine and digitalls, have in each new patient awakened fresh hopes of recovery, hopes, alas, to be highted as were those in the hearts of patients who hoped and ed while using the remedies than those which general ly prevail are called for, and it is to this end and the belief that scientific investigation in one class of complaints will be more certain to attain success in this direction, than by occasional research and observation, while the mind is divided by general practice, that led to the establishment of the Ontario Pulmonsry Institute in this city during the year 1881, an institution which does afferd the best possible treatment of this class of diseases.

By the permanent establishment of such an institute, invalids can at all times consult the doctor personally—being an advantage that will readily be seen and appreciated by all.

Earnest and persevering investigation and fruitful experiments with different remedial agents have within a few years been made by men of eminent scientific attainments, which have been attended with the most gra

of very many persons rescued from disease and death.

The mode of administering remedies by the system of inhalation is acknowledged by all to be the most reasonable of any ever adopted, and most satisfactory in its re-ults.

Invalids who have failed to derive benefit from medical treatment, and who have made futiless trials of no-trums of the day, will find in this practice abundant reason for hope, as numerons instances have been reported even of the entire restoration to health of parties in this city and vicinity who have made thorough trial of the remedies, although they had previously been pronounced in an advanced stage of consumption.

Its particular efficiency is especially noticeable in throat diseases, which, if newleaded, and diseases of the heart. To this class of cases Dr. Williams gives his individual attention.

Those who desire to consuit me in regard to their cases had better call at the office for an examination, but if impossible to visit the office personally, may write for "List of Queetions" and a copy of my "Medical Tractice," both of which will be sent free of charge. Address
