RAND SUBMARINE ROCK DRILLS

Rand Submarine Rock Drills are large powerful modifications of the company's standard types of drills, enlarged and improved for the heavy duty service of handling long heavy steels under extraordinarily hard conditions.

Working conditions demand a variety of mountings for submarine drills, therefore, mountings are furnished to suit individual conditions.

Materials—The most carefully selected materials are used in the manufacture of Rand Submarine Drills. Vital cast parts are made of high-grade open-hearth steel castings and steel parts are made of finest selected steels.

Workmanship—Rand Submarine Drills are manufactured by mechanics who are experts in their line, with years of experience and every facility and incentive for the best work in a shop devoted to the exclusive manufacture of rock drills.
