ON REQUESTPROTECTION FOR BOOK-
BINDINGS.

A NOVELTY for the protection of fine bindings without hiding any of their beauty, has made its appearance. The material used is a transparent composition in sheet form, about one-sixteenth of an inch thick. A piece of this, a little larger than the book to be enclosed, is bent to the exact shape of the book—that is, with a rounded back—and the top and bottom are closed by leather strips. Into this case the book is slipped, and the transparent material permits every detail of the binding to be seen through it as if the volume were enclosed in glass. Lying on a table a binding thus protected loses none of its elegance and may be turned over and examined without touching the book itself. It is equally valuable for library shelves, as it is a complete protection yet leaves the shelf back plainly visible.
