support and wheel, the paper-supporting carriage and mechanism oncrated by the upward movement of the type wheel support to move said carriage laterally, as set forth. 4th. The combination of the rotary type wheel, the movable support therefor adapted to be derotary type wheel, the movable support therefor adapted to be de-
pressed by the operator, means for automatically raising said suppressed by the operator, means for automaticaly raising said sup-
port and wheel, the paper-supporting carriage, movable on guides on port and whee, the paper-supporting carriage, movable on guides on
the supporting base, provided with a rack $k$, the pinion $l$ supported by said base, and the $\operatorname{dog} n$ pivoted to the type wheel support and adapted to engage with said pinion, as set forth. 5th. In a type writer, the combination of the carriage $h$, mechanism, substantially as described, for feeding said carriage laterally, the paper holding slide $m \mathrm{I}$ movable on said carriage, at right angles to the direction of movement of the latter and the spring $n \mathrm{I}$ and notched plate or, whereby the operator is guided in moving said slide. as set forth. 6 th. The combination of the carriage $h$ having the rack $k$, the pinion $l$ and the dog $n$ provided with the arm $k$ and $\mathrm{knob} j$, whereby said dog may be disengaged from the pinion, as set forth. 7th. The combination of the carriage $h$ having the rack $k$, the pinion $l$, the dogs $n$ and 8 , the latter having the arm $l$, and the former, the arm $h=$ bearing oh the arm li, as set forth. 8th. The combination of the type wheel, the movable support therefor adapted to be depressed by the operator, means for automatically raising said support, the ink ribbon reels and devices, substantially as described, operated by the upward movement of the type wheel support, for rotating one of said reels step by step and moving the ribbon longitudinally, as set forth. 9 th. The combination of the type wheel, the movable support therefor adapted to be depressed by the operator, means for automatically raising said support, the ink ribbon reels A A1 provided respectively with ratchets $\mathrm{C}, \mathrm{Cr}$, having teeth relatively arranged, as described, the dogs D, Dr, pivoted to the type wheel support and adapted to engage antomatically with the ratchets $\mathrm{C}, \mathrm{C}$, when said support rises, and means, substantially as described, whereby either of said dogs is made imperative and the other at the same time operative, as set forth. 10th. The combination of the automatically raised type Wheel support $c$, the dogs D, Dr pivoted to said support, the ink ribbon reels having ratchets engaged by said dogs, and the bar E adapted to slide in guides on the support $c$, and provided with studs $\mathrm{F}_{\mathrm{i}} \mathrm{F}_{1}$, adapted to act on the dogs D, Dr, and make the one operative and the other at the same time inoperative, as set forth. 11 th. The combination, with the ink ribbon reels, of the shouldered and threaded rods supporting said reels, and the socketed standards supporting said rods, whereby the ink ribbon reels are adapted to be laterally adjusted, as set forth. 12th. The combination of the rotary type wheel, the pivoted lever $c$ supporting the type wheel, the spring $g$, whereby the lever $c$ and the type wheel are normally raised, rnd the papersupporting carriage under the type wheel, as set forth.

## No. 20,096. Boltin Apparatus. (Blutoir.)

The Knickerbocker Company, (assignee of Orville M. Morse,) Jackson, Mich., U. S., Ist September, 1884 ; 5 years.
Claim.-1st. The combination, with an inclined screen of an air trunk and fan, whereby an air current is directed upwardly through the screen, an elevator whereby the material escaping from the lower end of the screen is returned to its upper end, and means whereby the material is caused to move laterally across the screen, substantially as set forth. 2nd. The combination, with a screen having the proper pitch or inclination to cause the material to flow over it by gravity, an air trunk and fan whereby an air current is directed upwardly through the screen, and an elevator whereby the material escaping from the the lower end of the screen is returned to its upper end, substantially as set forth. 3rd. The combination, with an inclined screen, of an elevating mechanism facing the sereen and an air trunk and fan, whereby an air current is caused to pass upwardly through the screen, substantially as set forth. 4th. 'The combination, with an inclined screen, of an elevator whereby the material escaping from the lower end of the screen is returned to its upper end, means whereby a lateral motion across the screen is imparted to means whereby a lateral motion across the screen is imparted to
the material deflecting devices, whereby the movement of the mathe material deflecting devices, whereby the movement of the ma-
terial across the screen can be regulated, and an air trunk and tan, whereby a current of air is caused to pass unwardly through the sereen, substantially as set forth. 5th. The combination, with an inclined screen and an elevator, whereby the material escaping from the lower end of the screen is returned to its upper end, of an air trunk and fan, whereby an air current is directed upwardly through a portion of the screen, substantially as set forth. oth. The combination, with a middlings purifier composed of an inclined screen, an air trunk and fan, whereby an air current is directed upwardly through the screen, and an elevator, whereby the material escaping from the lowef end of the screen is returned to its upper end, of a preliminary bolting apparatus composed of an inclined screen and an elevator, whereby the material escaping from the lower end of the screen is returned to its upper end, substantially as set forth. 7 th. In a combined bolting and puritying apparatus, the combination. with an inclined screen composed of sections of different degrees of fineness arranged side by side, of an elevator whereby the material escaping from the lower end of the screen is returned to its upper end, mechanism whereby an aircurrent is directed upwardly through the coarse portion of the screen, and means whereby the material is caused to move laterally across the screen from the fine to the coarse sections, substantially as set forth. 8th. The combination, with an inclined screen, of an elevator whereby the material escaping from the lower ond of the screen is returned to its upperend, a casing enclosing the elevator and screen, and an air trunk arranged between closing the elevator and screen, and an air trunk arranged bet.ween ly through the screen, substantially as set forth. Yth. The combination, with an inclined screen, of an elevator, whereby the material escaping from its lower end of the screen is returned to its upper end, a casing enclosing the elevator and screen, an air trunk arranged between the elevator and screen, and flexible strips or curtains $k . k 1$, attached to the air trunk ard resting on the screen or casing, sub. stantially as set forth. 10th. The combination, with an inclined screen, of an elevator, whereby the material escaping from the lower end of the screen is returned to its upper end, a casing enclosing the elevator and sereen, an air trunk arranged between the elevator and screen, and adjustable deflecting boards attached to the upper end of the air trunk, substantially as set forth.

No. 60,097. Ice Creeper. (Crampon a Glace.)
Charles F. West, Philadelphia, Penn., U. S., 2nd September, 1834; ${ }^{5}$ years.
Claim.-1st. An ice creeper embodying a shayk, clips and spurs. formed of a continuous piece of wire, substantially as and for the purpose set forth. 2nd. An improved ice creeper consisting of shank, clips at the sides thereof, and spurs projecting from the olips formed of a continuous piece of wire, substantially as and for the purpose set forth. 3rd. The shank A. clips B and spurs C, formed of purpose set forth.
the parts $a, b, c, i, f$, continuous of each other, substantially as
a described. 4th. An ice creeper formed of a continuous piece of wire described. 4th. An ice creeper formed of a continuous piece
having a shank. clips and spurs, said shank consisting of two elast arms a, $a$, which are united by a bend at the rear of the shank. suber stantially as and for the purpose set forth. 5th. An ice creper as
formed of wire having a tonth at the rear thereof, substantially as formed of wire having a tonth
and for the purpose set forth.

## No. 20,0@8. Device for Trimming the Soles of Boots and Shoes. (Appareil Parachever les Semelles des Chaussures.)

James Welsh, Plymouth, Penn., U.S., 2nd Ssptember, 1834; 5 years. Claim. - -1st. In a device for trimming boot or shoe soles, the combination, with the cutter D composed of the top plate $d$ and the cutting side plate $d \mathrm{r}$, the lower cutting edge of which has a controrysimilar to that of a boot or shoe sole, of the actuating lever $\mathbf{B}$ carry ing said cutter and pivoted to a proper fulcrum, at $b$, in such nandoo, as to swing the cutter and make it act on the sole of a boot or sho, held in position by any suitable support, substantially as set forth. held in position by any suitable support, substantially as see soles,
$2 n d$. The combination, in a device for trimming boot or shoe
, with the cutter D composed of top plate dand cutting side plate di, ${ }^{\text {dit }}$ With the cutter $D$ composed of top plate $a$ and cutting side $d$ and ar-
and the pegging and points E , E , depending from the plate $d$ antour ranged concentrically within the plate $d \mathrm{~d}$, on a line having
similar to that of a boot or shoe sole, of the actuating lever B, carry ing said cutter and pivoted to a proper fulcrum, at $b$, in such oot or ner as to swing the cutter and make it act on the sole of a booti-
shoe, held in position by any suitable support substantially as spe shoe, held in position by any suitable support, substantially as spinafied. 3rd. In a device for trimming boot or shoe soles, the combin of tion, with the pegging awl points K . E, and cutter D, composed top plate $d$ and side cutting pl

No. 20,099. Twist Drill. (Foret Tors.)
George H. Burroughs, Princeton, N.J., U.S., 2nd September, 1854 ; 5
years. to make a draw or shear and shaving ner and for the purpose set forth. 2nd. A drill having i eurved cutting edge lying in, or nearly in a plane, at right angles to the axis as the drill, so as to give the latter a draw or shear and shaving cut, set forth. 3rd. A drill having longitudinal recesses at the inner sipenof the grooves, forming ledges or angles, adapted to guide in sharp ${ }^{\theta}$ ing the drill, as set forth.
No. 20,100. Valve tor Enginery and Vessels.
(Soupape pour Machinerie et Vaisseaux.)
John E. Jerrold and Christian L. Burgermaster, Allegheny, Penn., U.S., 2nd September, 1884: 5 years.

Claim.-The combination, with the three-part casing C, D, E. the ${ }^{\text {E }}$, former having the stem $N$ provided with the valve $B$ and spring ${ }^{\text {portion }}$ of the screw-threaded stem I engaging the screw-threaded por the $K$ and passing through the parts D, E and resting on the top of stem $N$, and the wheel $H$ and packing-piece $G$, substantially as and desuribed and for the purposes set forth.
No. 20,101. Baling Press. (Tresse d'Émballage.)
David W. Sealey, Albany (assignee of Alexander Buckman, Scho ${ }^{\text {t- }}$
ack, N.Y.. U.S., 2nd September. 185t; 5 years.
Claim.-1st. In a baling press, the pressing chamber A prords, to with adjustable walls A1, moveable as at a, at their forward ention to a contiguous stationary part of the press and arranged in rela comthe baling chamber B, as herein described, for the purpose pleting the compression of the material, before the bale is $p$ p the baling chamber, as herein specified. 2nd. In a baling $p$ baling chamber $B$ provided at two of its oppositely located sides, with a single opening $B r$ and guiding-strips $b$, for the is ejectm from the press, as herein specified. 3rd. In a baling press, the Bar ar bination, with the pressing chamber $A$, of the baling chainber and ranged in relation to the pressing chamber, as herein describg provided at each of its vertical sides, with a single opening specitop and bottom guiding strips $b$, as and for the purpose here chsuber fied. 4th. In a baling press, the combination, with a baling cly locsted B provided with a single opening BI in two of its oppositely adapted vertical sides, of the guiding strips $b$ and adjusting screws ${ }^{\text {c a }}$, to press against the middle portions of said guiding strips, the purpose herein specified.

## No. 20,102. Flour Bolt. (Blutoir.)

The Knickerbocker Company (assignee of Orville M, Morse), Jsckson, Mich., U.S. . 2nd September, 1884; 5 years.
Claim-1st. In a separator, the combination of a sieve or screas having the proper pitch or inclination, to cause the material from over it by gravity, and having its mesh increasing in coar capacity or, its upper end to its lower end, to increase the separa the screen as the velocity of the material increases, whereby the material escaping from the lower end returned to its upper end, substantially as set forth. or inclination, to cause the material to flow over it by
