PANOPEPTON

EXPEDITIOUS IN SERVICE

Being fluid, agreeable, ready for absorption, Panopepton passes quickly from the mouth to the stomach and thence swiftly to its ultimate destination, leaving a grateful sense of comfort at every stage of its progress in imparting instant refreshment as it is absorbed. Having real food value, Panopepton gives good results that are sustained, not transitory like those of a stimulant.

One of the many directions in which Panopepton proves valuable by reason of the expedition and certainty of its service as a supporting food is in the summer diarrhoeal troubles of infants and children. To this use it is also especially commended by being perfectly soluble and sterile.

PANOPEPTON presents an ideal resource for the nutrition of the acutely ill in a wide range of conditions, for its nutritive substance is in a condition most readily available for the organism. It supports nutrition and maintains energy without making any draft upon the system. It is completely soluble, sterile and assimilable, with 20% of solids and a carefully considered balance of proteid and carbohydrate.

Years of experience are revealing the extent to which Panopepton may be relied upon for almost exclusive nourishment in critical cases, to the manifest advantage of avoiding all risk of indigestible or fermentable foods.
