McGILL UNIVERSITY.
Montreal.

Macdonald Physics Building.

September 2 1920.

Dr. F. D. Adams,

Dear Dr. Adams,

I am grateful to you for your helpful criticisms (19 Aug.) about a Course in Engineering Physics.

- (1) The shortage of suitably trained men is so grievous that I trust a way may be found of starting this scheme at least provisionably, at the beginning of the coming session. *(1920-21)*
- (2) The Honour Courses in Physics are of an elastic character and no time-table difficulties seem likely to occur.
- (3) B.Sc would perhaps be more suitable than B.A.
- (4) Six hours work per week (Electrical Measurements Course) is taken in the previous year, and 4 hours lectures (Courses 14 and 15) are substituted.

I do not think that this course can be recommended to men who have not ability above the average, however.

- (5) The question of M.Sc should certainly be brought before the Committee on Graduate Studies.

Yours sincerely
A. S. M.
