

The attention of students is called to the fact that the exception made in the Provincial Medical Act, regarding students who commenced their studies before a certain date, has now ceased to take effect; and that in future the Provincial Medical Board will rigidly enforce the clause demanding four years of study previous to graduation. It will thus be seen that degrees from Colleges requiring a less number of years of study will no longer qualify for Registration under the Act.

Since the establishment of the University of Halifax, the Halifax Medical College has become affiliated with that Institution, thus affording the student an opportunity of obtaining a University Degree without the necessity of going abroad for it.

One of the students of the College has already availed himself of this privilege, and it is a good-proof of the efficiency of the training given, that he passed the examinations for the Degree of M.B. with honors; and in no instance, as far as known, have students from this Institution failed to pass the examinations required by the old country Colleges.

The following extract from the regulations of the Senate of the University of Halifax, is of interest in this connection:

"During the years 1878, and 1879 and 1880, Candidates for the Degree of Bachelor of Medicine or of Bachelor of Science, who have passed the Preliminary Examination of the Provincial Medical Board, shall, upon producing to the Registrar satisfactory evidence of this fact, be allowed to proceed to the Examination for the Degree of Bachelor of Medicine or of Bachelor of Science without being required to have passed the Matriculation Examination of this University."

Students of Dentistry will find it of advantage to attend the Lectures on Chemistry, Anatomy and Practical Anatomy.

To Druggists' Assistants the courses in Materia Medica, Chemistry, and Botany, offer an opportunity to qualify themselves for passing the examination required to admit them to a Degree in Pharmacy in accordance with the regulations prescribed by the College, with regard to which, see Regulations, &c., for Students in Pharmacy, or for passing the Board of Examiners of the N. S. Pharmaceutical Society.

Students of Law will find it desirable to attend the Lectures on Medical Jurisprudence, especially as part of the course is delivered by a legal gentleman.

In continuing the prosecution of their endeavour to furnish a sound Medical Education, the Faculty has to state that no effort will be spared to keep the standard of teaching on a level with the present state of Medical Science.
