EUCOZONE

**EUCOZONE LABORATORIES
(CANADA) LIMITED
WINDSOR, ONTARIO**

220A)

EUCOZONE . . .
its application enables it to retain its
antiseptic value as it works its way into
the tissues of the injured areas and be-
cause of its penetrating volatile oil char-
acteristics Eucozone reaches right down
into the affected areas and facilitates
nature's work of healing.

EUCOZONE . . .
Laboratory tests show that when Euco-
zone comes in contact with moisture it
releases nascent or active oxygen during
a period of many hours. It is well known
among scientists that freshly liberated
oxygen is a powerful antiseptic. This
knowledge is underlying the purification
of drinking water supplies and in the
combating of pollution in swimming
pools, etc. **EUCOZONE** is an oxygen-
carrier, a holder of nascent oxygen—
therefore basically a valuable antiseptic.
Eucozone combines with nascent oxygen,
the well known therapeutic value of euc-
alyptus oil. The fact that Eucozone con-
tinues to release nascent or active oxy-
gen during a period of many hours after

its application demonstrates

that Eucozone is an oxygen carrier.

Eucozone is the result of thirty-two years of

research and experimentation by an in-

ternationally known chemist. Large sums

of money have been spent in its devel-

opment. During the past few years Euco-

zone products have been used in sev-

eral prominent hospitals and by an ever-

increasing number of prominent physi-

cians with outstanding results. Now for

the first time it is being manufactured

commercially in Canada and offered to

the public.

pollution des baignoires, etc. **EUCOZ-
ONE** possède de l'oxygène, contient de
l'oxygène nouveau—par le fait même est
un antiseptique de grande valeur. Euco-
zone joint à l'oxygène nouveau la valeur
thérapeutique bien reconnue de l'huile d'
eucalyptus. Le fait que l'Eucozone con-
tinue à dégager un oxygène nouveau ou
actif pendant plusieurs heures après son
application lui permet de conserver sa
valeur antiseptique pendant qu'il pen-
ètre dans les tissus des parties blessées,
et à cause de ses huiles volatiles Euco-
zone atteint les parties affectées et aide
la nature à guérir.

In All Eucozone Products
The release of nascent or active oxy-
gen with its antiseptic properties con-
stitutes one of the most important pro-
perties of all Eucozone products.

EUCOZONE OINTMENT
PROPERTIES: Eucozone Ointment is
for external use ONLY. Recommended
in cases of Athlete's foot, itch, carb-
uncles, boils, and wet or dry
inflammations. Eucozone Ointment is antiseptic
and is incorporated in a base very com-
patible with the tissues. CONTESTS: 1 oz.

DIRECTIONS: Soak or use hot towel.
Wipe affected area clean. Apply oint-
ment evenly. Where not too tender mass-
age gently and thoroughly. Bandage if
desired. Repeat when ointment is ab-
sorbed or wiped off. This ointment is
for EXTERNAL USE ONLY. (OVER)
