the pulse and temperature both normal. During these two months this woman has increased in weight a little over ten pounds, in fact the most notable effect of the scrum was the voracious appetite it immediately developed in this patient.

CASE NO. VI.

This is a lady fifty-four years of age, suffering from broncho-pneumonic tuberculosis, whose husband died some ten years ago with laryngeal tuberculosis. She lost one sister about fifteen years ago with lung

CASE VI. Fig. 6.—a. Percussion; "cracked pot;" b. percussion slightly impaired and expiratory crepitant rules; c. fibroid change. Date March 22nd, 1904. d. Percussion unchanged; no rûles; c. Unchanged. Date July 16th, 1904.

CASE VI. CHART 6.

disease. Never had any children. Enjoyed very good health until about five years ago; she then started to lose flesh, but picked up a little under tonic medication. However, about four years ago an examination of the chest revealed involvement of the right lung. She was treated for some time in a sanatorium, from which she was discharged about
