## The Necessity of Modifying Caseine.

“The object to be accomplished in the preparation of cows' milk, is to make it resemble human milk as much as possible in chemical and physical properties. To do this it is necessary to reduce the proportion of caseine, to increase the proportion of fat and sugar, and to overcome the tendency to coagulate into large firm masses upon entering the stomach.”—*Starr*.

Fairchild's **PEPTOGENIC MILK POWDER** converts caseine into minutely soluble and coagulable albuminoids corresponding in constitution and digestibility to the peptone-like albuminoids of breast milk, and modifies cows' milk in all particulars to the composition of normal breast milk.
