## THE BALTIMORE TUBERCULOSIS EXPOSITION.

BY J. H. ELLIOTT, M.B.,<br>Physician-in-Charge, Maskokn Cottage Sanatorium, Gravenhurst, Ont.

Ore of the most successful eftorts thus far made to popularize the present scientific crusade against tuberculosis was that made .. Beltimore during the week of January 25th, under the abore n:mis, the result of the combined actions of the Tuberculosis Comwission of Maryland, the State Board of Health, and the Maryi.uid Public Health Association. It was "An objective presentation to t'.e people of Maryland of the history, distribution, varieties, causes, cost, prevention and cure of tuberculosis." The presentation was a most exhaustive one, with every phase of the study well represented, and by such graphic methods as to show the important features of each department at a glance, and in inch a way as to leave a lasting impression.

Each evening lectures were given by some of the most prominont men in America dealing with some aspect of the tuberculosis problem, arousing public interest to such an extent that McCoy ITall was utte!ly inadequate to accommodate those who came from day io day. The attendance increased until on Saturday it was ustimated that between 6,000 and 7,000 people passed through the hall during the day. On this account the Exposition, which was only to have lasted one week, was kept open three days longer.

To write any detailed accuant of the exhibits would require a volume, for one day was quite insufficient to even get a fair idea of the details, while several days could be well spent in a thorough study of all that had been collected. As an example, one only need mention the cases containing the literature on tuberculosis collected by Dr. Osler, from Hippociates and Celsus to the prescint day, every volume of which was intensely interesting.
