☾ The column of the moon's southing gives the time of high water at Parrshoro', Cornwallis, Horton, Hantsport, Windsor, Newport, Truro, &c.

We need not here go into a minute examination of all the various items of good and bad management, but we may merely recall a few things to remembrance. The loss of hay and other food of sheep and cattle, by their exposure in open fields to cold winds in winter, causing a consumption of nearly double the amount needed for them in warm places, would in a single season, be enough to erect good and cheap shelters, to say nothing of the improved condition of the animals, and security from loss by death. A great saving would often result by taking fine animals to breed from. A fine and handsome animal is as easily raised as a bad and ugly one, and frequently commands a double price in market. A similar advantage would result from selection of seed. Many days labour may be annually avoided, by procuring the very best tools, where there are such as are much in use. A vast amount of valuable time, and some fretting, may be saved by having a place for everything, and everything in its place, and habits of leaving things out of order, which are very hard to conquer, and which like all kinds of carelessness, are the bane of fine farming, be prevented.
