

While this has not been a week as prolific as many others in important miversaries, nonetheless it recalls that have been of no mean events import in the history of the world. will run over a few of them, in the hope that some of the readers may be interested in their mention.

Beginning with last Sunday, January 24th, we find that it con ates the birth of Frederick the Great of Prussia, which took place on that date, in 1712. It was on the same day of the month, in 1779, that Lafayette returned to France from Am erica. Having supported the American cause with his sword, and stood Washington throughout the war of Independence, Lafayette went back to France covered with glory, hailed a hero, a patriot and renowned warrior. He returned just in time to fall into the arms of the French na tion as the terrible Revolution, that was soon to rock the world with its "Terror" was beginning. And in France he was destined to play as important a part as he had played in America. On the 24th January 1838, took place the great earth quake that shook all Europe. Per haps it was the most widefelt pheno menon of that class ever experienced in the world; principally because it affected a thickly populated portion of the earth.

The 25th January commemorate the origination of King James' Bible in 1604. On the same dase, in 1627, Robert Boyle, the Natural Philo-sopher, was born. It might be remarked that both Ganot and Atkinson, in their works on Physics, drew considerable inspiration from the formulae and the distoveries of Boyle In 1759, on the 25th January, the famed Robert Burns, the nationa Bard of Scotland, was born. The story of Burns is as familiar as his unsurpassed lyrics, and it is better to make only a passing reference to the date of his birth, because th subject is one too extensive, and too attnactive, for such a sketch of dates as this. On the 25th Jan ary, 1785, Matthew Carey opened his publishing house in Baltimore -th fame of which was widespread one hundred years ago. The 25th Janu ary was also the anniversary of the Danie birth of the Inish painter, Maclise, which event took place in 1811. Like Barry and Ford, Mac lise carried the fame of Ireland's artistic greatness into all Europe and left behind him imperishable worksall of which shed a lustre upon his race and country.

The 26th January, 1622, saw the first settlement of Nova Scotia-and the history of the next century 0 that land of Acadia is one of the most interesting pages in the annals of the New World. On the 26th January, 1823, Dr. Jenner, the discoverer of vaccination, died. On the same date, in 1887, the State of Michigan was admitted to the American Union In 1861, on the 26th January, the State of Louisiana seceded. And on the 26th January, 1875, Archbishop Patrick Lahey, of Cashel, in Ireland, died. He it was who had for succes the famous Archbishop Croke whose death was lamented a coupl of years ago. In these columns, that time, a correspondent told story of "Cashel of the Kings."

the Germans, after the Franco-Prus war. On the same date, in sian 1893, the United States lost one of its most conspicuous citizens, by the death of James G. Blaine.

The 28th January seems to have had more than an ordinary share of anniversaries. In the first place, on the 28th January, 814, Charlemagne the renowned Catholic monarch Fnance, died. On the same date, in 1725. Peter the Great of Russia, died. It was he who founded the city of St. Petersburgh, and build it upon spiles driven into the swamps that lined the Neva. He gave Russia the first of her fleet, and con structed the great norther fortress of Cronstadt, situated about eighteen versts from St. Petersburgh. On the 28th January, 1768, Cardinal Cheverus, the first Bishop of Boston, was born. On the same date, in 1802, Clare (Fitzgibbon) died. Ir Lord 1807, on the 28th January, London was lighted by gas for the first time. We can scarcely form an idea of London in that day as compared with the London of the present. Gas was wonderful to the people of the dawning nineteenth century, while electriwith all its miracles of transformation, has become so familiar to the people of the opening twentieth century, that it is almost universa nsidered quite ordinary. On and co the 28th January, 1859, Prescott, the historian, died. To him do we

owe much of the knowledge that the world now possesses concerning the conquests of Peru and of Mexico. His works are now considered as standard authorities in all that koncerns these two countries.

The 29th January, 1737, Paine the infidel was born. This man became notorious on account o the French Revolution coinciding with the publication of his "Age of -a book that has only its title to recommend it. Of all the attempted philosophies that lack the elements of logic Tom Paine's is the worst. Only in an age of political insanity could men possibly stultify themselves to the extent of ranking Paine amongst the world's thinkers On the 29th January, 1820, King George III., of England, died. On the same date, in 1828, the famous Archbishop Marechal, of Baltimore, died. And on the 29th January 1861, the State of Kansas was mitted to the Union-just three days after Louisiana had seceded.

This day, the 30th January, a day of striking anniversaries. It was on the 30th January, 1521, that Bishop John Folan, of the patriotic Episcopal ruler of Limerick closed his earthly career. On the 30th J ary, 1654, the transplantation Janu-Loughrea to Connaught commencedan event ever memorable in the penal story of Ireland. On the 30th January, 1649, King Charles I. of Eng-land was executed. On the self-same day—the 30th January, 1660, the bodies of Oliver Cromwell, Henry Ireton and John Bradshaw were hanged at Tyburn and buried under the gallows-a strange and remarkable dispensation of fate. On the 30th January, 1869, William Carleton, the Irish novelist, died. He had gained

ion

his r

could never be. Friends of the right ort will help hi more to be happy and successful than much money of great learning.

When Garfield entered Williams College, he won the friendship of its pre-sident. Mark Hopkins. Years afterward, 'when president of the United States, he said: "If I could be taken back into boyhood, to-day, and have all the libraries and apparatus of a university, with ordinary rout sors, offered me on the one ine profes hand, and on the other a great lum inous, rich-souled man, such as Dr. Hopkins was twenty years ago, in a tent in the woods alone, I should ay, 'Give me Dr. Hopkins for my college course, rather than any versity with only routine professors." Charles James Fox, unfortunate in home training, had his defects largely remedied through his associ ation with Edmund Burke.

History, both sacred and profane is full of examples of the effects of friendship on character of David and Jonathan bring out all that was best in both those royal souls? Would Aquila and Priscilla have developed so grandly without the friendship of St. Paul? What would Cicero have been without Atticus, or Xenophon without Socrates?

"What is the secret of your life?" asked Elizabeth Barrett Browning of Charles Kingsley. "Tell me, that I may make mine beautiful, too." "1 had a friend," was the reply. This is the secret of many a great and successful life. Many men would have lain down disheartened, long before he reached his goal, but for the stimulus and encouragement of some friend whose name the world has never heard. Hundreds who are lauded in the press and honored all oven the world for their achievements owe their success largely to the encouragement of wives, mothers, sisters on other special friends.

The average man little realizes how great a part even of his material H uccess he owes to his friends. takes to himself the entire credit of every achievement, boasting of his marvelous insight, judgment own and hard work. However, if We should eliminate the inspiration and the free advertising they have given us; and if we should deduct from our popularity the percentage due to their good wonds, and give up situations they helped us to gain, the majority of us would find a great shrinkage in what we thought own achievement.

"Our chief want in life," says Emerson, "is somebody who shall make us do what we can. This the vice of a friend. With him we are easily great. There is a sublime attraction in him to whatever virtue there is in us. How he flings wide open - the door of existence! Wha questions we ask of him! What an How understanding we have! words are needed! It is the only real society. A real friend doubles possibilities, adds his strength to mine, and make a well-nigh irresistible force possible to me."

The example or encouragement of a friend has proved the turning-point in many a life. How many dull boys and girls have been saved fram failand unhappiness by discerning ure teachers or friends who saw in the possibilities that no one else could ee, and of which they were them selves unconscious! Those who appreciate us, who help to build up indestroying our self-confistead of dence, double our power of accom plishment. In their presence we feel strong and equal to almost any task that may confront us.

A man should start out in life with the determination never to sacrifice his friendships. He must keep them alive or sacrifice a part of his man hood and a part of his success. There

must be a live wire kept continually between him and them ds thou hast, and their

We often hear the plaint that they are not up to the standard. If this is true, whose fault is it? Our own fault, of course Why don't we support it better? sociation, federation, the Catholio press, and above all a true Catholic spirit, animated with the all-pervading principle of Christian charity, noble, ardent and generous enth asm for the grandest of all causes Christian education, truth and right ousness, giving everyone his due and standing up for our own rights under the protection of our laws, the are the means at our disposal, and if we don't resort to them, and fail

in consequence, the fault is ours and we need blame no one else but ourselves.

## **A BISHOP'S VIEW** ON EDUCATION.

Addressing the students and their friends at the Laurel Hill Convent, Limerick, the Bishop of Limerick said: With regard to the teaching of domestic economy subjects, he should like a remark thereon to reach the Technical Department in Dublin. He set great store and importance on the ese subjects. Literary and scientific subjects could take care of themselves; but he thought in a poor country like Ireland it was of im portance to have attention directed to the practical and useful phases of education as well as other subjects. He knew nothing more useful for a girl at the end of her school days to be a thoroughly trained than housewife. The Department required that girls who took up domestic eco nomy subjects in their thind year of scientific study should take with them some independent branch of science. He should say this was too much. Two years of science seemed to him to be ample gualification, and then for the third year before they left school to devote themselves to practical and useful subjects. If this knowledge of science was necessary

for cooking and laundry, two year ought to be sufficient, and the third year could be more usefully employed by girls in the study of domestic economy subjects. . .

He should like, too, that the system of inspection, which the Intermediate Commissioners employed for a year or so, should be continued and improved, as he thought it was of great importance for the good work that was being done in their schools that competent, experience men should go round and see actually the conditions under which education was carried on. They should see the methods followed, and not be sa tisfied, as the Commissioners s to be at present, with a mere paper examination. .

He had been greatly struck the other day by an observation of Mr. Lecky, who said that one of th greatest practical mistakes made by the authors of the Protestant Refor mation was in the abolition of convents for nuns. When they looked at this city and the country and saw what the nuns were doing, they could realize the truth of Mr. Lecky's ne mark, and see that the people who

deprived themselves of so much pow-er for good made an egregious blun. Household Notes without the trouble of rub-ting. Put the silver into a pan, cov-

It was mentioned in my first article upon the old "Quebec Almanac, for 1821, that, as an appendix t that year's issue, there is a sketch o Canada, written in 1811. It would be a long story were I to attempt to reproduce even a few extracts from a "sketch" that covers forty very closely printed pages. It would be th however, very amusing to note queer ideas they had in those day about the extent of the country, and the very elementary and inaccurate

ideas of Canadian geography they possessed. I will not try enter into the subject as it would be interminable. But there is one of this appendix which I am confident will prove interesting to the reader of to-day, and from which I will borrow a few brief extracts.

THE POPULATION .- The popula tion of Canada, at the time of the conquest, was about 60,000 souls, including the whole of the settle ments to Detroit. At present (in 1811), the population of Lower Canada, (our Province of Quebec), is estimated at 400,000, about seven eighths of which are of French de scent, and profess the Roman Cath olic religion; the other eighth is com posed of English, Irish, Scotch, Ger nan,s Americans, and their descend ants. Of these, the Americans now the most numerous; the next the Scotch. Till recently, the latter have carried on nearly all the exterior trade of Canada. They now divide it with the English, Urish and Amercans. There is hardly an instance o the French descendants, who are almost exclusively called Canadians in the country, being engaged in external trade; they, however, share large ly in the retail and internal trade. There are, as yet, no manufactories in the country of any note; those of leather, hats and paper are, ever, introduced, and the cloathing of the farmers is generall made in their

There are two Iron Works families. in the vicinity of Three Rivers.'

A MIGHTY CONTRAST .- It would a needless task to establish a contrast between the conditions that obtained in 1811 and those of to-day. The Island of Montreal, in this yea 1904, has as great a population a TA had the entire province then. would be no easy task for the imagination to figure this whole prov without a single manufa ince outside the Iron Works on the St Maurice, and the four or five and paper factories of Montreal and Quebec. One of the most interesting passages in the whole book is that which deals with the Canadian (French), as a people, and in which we get a very fair idea of how they were regarded by the best British minds of the time. When article were being published calculated to prejudice the English mind against the Canadians and their religion, w find the author of this important sketch making a strong effort to do them justice. Some of his remarks might be amended with considerable truth, but as they appear I will quote a few of them; it not being my

duty, at this moment, to criticize.

## **OUR PUBLICATIONS.** (By a Regular Contributor.)

SATURDAY, JAN. 30, 1903.

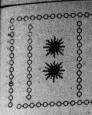

ABOUT "CANADIANS." " The of the Canadian population may be said to be agriculturalists. is no happier people in the world. Their labor affords them the ries of life; no part of it is taken from them, but what they consider as being for their own use. Amongst them, ambition and vanity rarely create unreal wants, nor envy sours real enjoyments. In the ordin ary state of human happiness they are cheerful and lively. To evils be yond their control they submit with that resignation. They are strongly attached to their religion, their country, laws, customs and manners; and

are averse to all innovation. They partake of the French character, something in the same way as the New Englanders partake of that of Englishmen. Both have been modi fied by circumstances, and now differfrom their origin. Where there isplenty of land to cultivate, the man who lives by labor depends only on the Almighty and himself. An America, the independent spirit of the-Englishmen sometimes degenerates into licentious coarseness; the servility of the Frenchmen disappears. The Canadian peasant acknowledges superiors; to them he is respectful, but he expects a corresponding attention; an omission in this respect is not easily forgiven. To his equals he is oolite and obliging; inferiors he knows of none: what he possesses he owes to his labor, and every welfbehaved person enjoys the Same means. If one of them serves theother, he is as one of the family. The-Canadian farmer is social, to a fault; much of his time is sacrificed to this quality. It is this which prevents the young people from removing to a distance to occupy lands; it is this, also, which is the source of that value set upon the opinion of others; which frequently degenerates into vanity.

"In his person, he is of the middle size, firmly made, and active. There ie no people capable of greater fatigue and privation. In these, the-Canadian is singularly supported by the gaiety of his disposition. His mind is unimproved; his ideas confined; his character excellent. In worldly concerns he reasons and acts from his own experience, his feelings, or some long received maxims. He is mistrustful of what he hears, or reads, especially when it does not come from those of his own class. In spiritual concerns, he is guided by his parish priest, (Cure), who, if he wishes to stand well with him, most meddle with nothing else.'

. . .

This is not the tone adopted by many a British speaker and writer in more recent years. Of late the Canadian is pictured as a "priest-ridden" superstitious and slavish being. But it is prejudice, coupled with bigotry, which dictates all these harsh and unjustificable criticisms; while the expressions of the writer of the above quoted article, savor of fair-mindedness, and honesty. The same wniter pays a splendid tribute to the bravery of Canadian soldiers, and the fidelity of the Canadian clergy during the war with the United States that was raging during the very year in which he wrote.
