The Development of the Vein on the

permissible inference that the other Le and also to a serious degree endangers beyond the dyke named. This in turn Proper guides will be put in along the beyond the dyke hanted. This in Froper guides will be put in along will affect such properties as the Whate sinking and sateties placed in the skips Bear, which are thought to be located on a continuation of the Le Roi weston a continuation of the Le Roi No. 2.—Insert is the ward beyond the dyke. Also it is to be being done in the No. 1 with the exception of the strike was made in an aption of the sinking of the shaft which is raise from the 500-foot level of the Josie mine and demonstrates particularly the continuity of the vein from the surface whence it was followed down or over 140 feet to the level mentioned. As this vein has been found to preserve its values at this depth and as it will be remembered that assays obtained from this ledge have run higher than any others in the camp a valuable asset has evidently been added to the Le Roi No. 2.

The Northport smelter blew in its fifth furnace on Friday, making the nominal capacity of the smelter upwards of 1,250 tons per diem. It has happened that alsimultaneously furnace No. 4 has run down and repairs have to be made to its water jacket. This will take some It thus chances that the blowing to the wealth of this promising mine. in of the 11th furnace, owing to the coincidence of the running down of one of its fellows, does not increase the actual capacity of the smelter for the time being. The fourth mechanical roaster is in operatios. The new engine for the supply of air to the blowers has been installed and is in operation. On the other hand it has become necessary to place the old engine in repair. One side has been taken down, the high pressure, and the low pressure side will follow. Thus more time will be here expended. The track has been completed and the orebins for the reception of the Le Roi have been built

and are in operation.
The strike on the Homestake is the most important that has been made for many months in this camp, inasmuch as the mine is located in the South Belt, which has been under a cloud, so to speak, owing to the lack of results which have so far followed the work done there. The pay ore shoot in the Homestake has drifted on for a distance of 33 feet and the full face of the drift was in ore of a pay grade last evening. The strike is certainly one which is of great moment to the camp.

The Output.

There were seven shippers during the past week, the Velvet and Portland havdropped out pending completion of arrangements at the Northport smel-The Giant is shipping nothing and will not do so until the pending transfer 2,000 tons under its average, mainly distributed by the changing over of the systems in operation at the mine. Homestake.—The pay ore shoot found a week since in the Homestake had been drifted on up to last evening for about ton of the levels of the two lower floors large shipments of ore to Kaslo. For the 33 feet. The full face of the drift was is being continued. in ore of a pay grade, and carrying more expected. The ledge is in place and as far as the sides and they also were of ore. A feature of the strike is that the pay shoot is solid and unbroken and is strongly mineralized throughout. The gangue is a white quartz, carrying gold, silver, lead and copper. From the face of the drift to the dike, towards which the drift is being driven, the distance is about 87 feet. Should the shoot continue that far, and it is almost certain that it will it will be over 100 feet in length. The dike, which is for operation in a shart time. be met 87 feet from the present breast shoot will be picked up on the west side week. be richer and wider west of the dike than is east of it. After the connection is usual lines, but there were no developmade by the upraise with the shaft and shaft is deepened another 100 feet blow the floor of the present drive, which will depth of from 400 to 500 feet on tunnel continues and good progress is beaccount of the sloping nature of the hill ing made. richer ore should be found. Altogether, continues and the showing of ore is satis
On the opposite side of the nave been at work all winter.

On the opposite side of the creek is the the outlook on the Homestake is most factory. ouraging and there is every reason to when the workof drifting along the ledge for 200 feet and the upraise has been made connecting the tunnel with the shaft Wallingford.—Drifting on the ledge is

THE MINING REVIEW to come has been done upon the old to come has been done upon the old shaft through which so much money has Districts Tributary to Kaslo and Their Yesterday might have been seen the STRIKE ON THE HOMESTAKE

the mme from shipment. There is no thorough system of connection between the two workings. Hence until such time as the old shatt has been put into thorough order the shipments of the Le Roi will be considerably curtailed. Drifts turn and additional Furnace Blown in—in—auguration of the New System at the Le Roi will be considerably curtailed. Drifts run from the old shaft naturally were made with a grade running to the shaft naturally were not shaft naturally were not shaft naturally were not shaft natur so that the transportation of ore on the facility. As the drifts from the new to about 500 tons a month. No difficu There are three events of interest to be marked in the annals of the week. The first in importance is the strike upon the Homestake, the second is the blowing in of the fifth furnace at the Northport smelter, increasing the nominal capacity to 1,250 tons a day, and the third is the definite location of the Anna-ledge at a death of 500 below the surface.

facility. As the drifts from the new shaft to low small was made on the same principle it is encountered in marketing the ore as the Trail smelter has contracted to take the Payne's output for the year. Last year about 1,000 tons a month was the regular shipment, and the increased charges of the smelters has reduced it by half. Mr. Zwickey says the Payne will make no effort to make large shipments on account to the old shaft. As there is much ore in the larger amount of attention to at a depth of 500 below the surface.

The strike upon the Anme assumes its importance principally from the fact that continuity of the north Le kor vein is practically demonstrated to the west ment is the taking out of the nump in price of lead again reaches a point when the continuity of the continuity of the north Le kor vein is practically demonstrated to the west ment is the taking out of the nump in price of lead again reaches a point when the continuity of the continuity of the number of the continuity of the north Le kor vein is the taking out of the nump in price of lead again reaches a point when the continuity of the continuity of the number of the continuity of the north Le kor vein the continuity of the number of these increased charges, but will development. When the eighth level is completed the mine will be in a position to make very large shipments when the price of lead again reaches a point when increased shipments with the continuity of the number of these increased charges, but will development. When the eighth level is completed the mine will be in a position to make very large shipments when the price of lead again reaches a point when increased shipments are continuity of the number of the strike increased charges, but will develop the continuity of the surface. the big granite dyke which is known the middle of the old shatt, which in-It is therefore a terteres with the working of the mine

Le Roi No. 2.-There is very little work making fair progress. There is only one drill at work stoping and the only reason for its presence is that a certain amount and the Joker worked in a manner that of ore must be sent down from the No. will prove its richness. A long tunnel the Josie, in order that the Josie may be er claims to supply drainage and to tap able to send down its ore over the flatter grade of the gravity tramway existing be- present shaft and crosscuts. Some remarktween the latter mine and the orebins on the railway track. The work on the Josie Joker, and the great width of the vein is principally on the Poorman shaft at its proves it to be one of the richest propervarious levels, in the sinking of the shaft and in the continuation of the upraise into the Annie shaft. The Annie vein nations of the property for the Old Counhas been discovered to possess the values at the depth now being worked at ported that it gives promise of remarkable as on the surface and the possession of a new and well provided oreshoot is added

Rossland Great Western.-The shaft is well night completed. Work is in progress cutting out the station at the 800-foot level. No ore has been shipped yet and owing to the smelter having had a run down furnace it is probable that the expected first shipment will be delayed for a while. The work of assembling the machinery for the motor for the 40-drill electric compressor has been started. The huge bedplate of the motor was yesterday placed in position. The concrete foun-dations are thought to be sufficiently settled to permit of the dead weight of the machinery being placed upon them. No turning over will be possible for sev eral weeks as the setting will hardly be solid enough to permit of any jarring.

New St. Elmo.-The north drift is in 123 feet from the north crosscut and the ledge is five feet wide and near the foot-wall there is five feet cmfwyp shrdluuu wall there is two and a half feet of ore that will average \$18.50 to the ton. This shod: of pay ore is about 25 feet in length and still continues in the face of shoot is being saved and will be shippd later on. The south drift is in 325 feet from the south crosscut.

Spitzee.—There is a good showing of ore of a high grade in the drift which is be-ing run on the 50-foot level. The ore ducers in the district. The Gibson, which which is now being met is of a white is located on the Silver Bell lead, and al quartz carrying excellent values. The drift ready has about 1,000 feet of tunnels and is in about 13 feet and is in ore all the drifts, will be opened up in all probabilof the property is completed and work began again. The Le Roi shapments are

Tran smelter during the past week and ore in sight to warrant the company in way. One carload of ore was sent to the ity. There is now enough concentrating

Prospects for the Year.

spectacle of the new system in full operation on the new shaft. The closing ed a year ago to tap the Payne lead at down of the old shaft practically cuts a depth of 1,000 feet will be completed in off the whole of the eastern workings of about three months and will be 1,700 feet so that the transportation of ore on the garding the property. One hundred men loaded trucks could be performed with are at work and the shipments amount increased shipments will be an object. No decision will be made as to future development after the ore chute is en-countered in the long tunnel until the eompany sees what it has. South Fork of Kaslo. The new wagon road up the South Fork of Kaslo Creek will probably be kept

busy with traffic this year by the army of men who will be working at the campe which it opens up. Camp Mansfield will situated higher on the hillsides than will probably be run from one of the lowthe lead at a much greater depth than th assays have been obtained iron the ties in the province. It is understood try owners during the winter have rerichness, and in view of these reports a large staff of men will be put to work to develop it to a shipping stage. vein has been traced for a mile on the surface, and very high assays have been obtained from ore taken from the different open cuts. When the Joker is opened up and its richness made public the bead of the South Fork will probably see much active development. Along the creek the Bismarck and the Cork have been ties adjoining the Silver Bell are also bebeen sunk 100 feet, and a very satisfactory Then there is always the hope that somebody with money will get hold of the Montezuma and place it where it should and 150 ounces in silver, Kootenay Mines.—There is nothing of property. There have been several ship-moortance transpiring at the mine. The ments of clean ore made from the Gibson, containing one foot of clean ore. There are also innumerable other claims on the event of the smelter being erected at with the yard until the snow disap- made to deve op the South Fork properties on a large scale.

One of the most promising creeks trilast three years ore has been shipped from evening Star.-The developing of the Woodbury Creek, and all the work has mencing at the mouth of the creek is the King Solomon Mining Company, which has a group of 40 claims, which cover a great deal of ground. The company has been working a large force of men for nearly a year. The chief development work been confined to sinking a winze in the old workings of the former owners A depth of about 150 feet was obtained, and drifting commenced both ways on the ven. In three other places tunnels are being run on the vein and the showing is very encouraging. The company is com posed of American people, who have made every preparation for mining on a very large scale. An air compressor has been installed and all work is done by machinery. The buildings are very complete and commodious ones. This year work will be proceeded with more energetically than esent drift tunnel being to Rossland Bonanza.-Work on the drift ever, and if the ore is there the company

partners. The vein has been tapped at five diffeernt levels. It is eight feet wide, very strong and well defined, and an assay from the paystreak gave 240 ounces in suver. It is a dry ore proposition, which further work will undoubtedly prove to be one of great value. A force of men have

Grant group of claims, which has made several shipments of very high grade ore. A small force of men are now at work on the group, which is owned by the Grant brothers and Charles Rosseter of Ainsworth. It is a silver-lead property. On the same dry ore belt as the Underhill property are two claims owned by

Frank Clapp, on which 100 feet of tunnelling has been done, in ore all the way. It is a small vein, about 21-2 feet wide,

and has assayed 140 ounces in silver.

The Silver Spray, owned by Charles
Moore of Kaslo, is the next property.
Considerable work has been done on it, and native silver encountered. The group comprises five claims, which give consider able promise, as the lead is wide and well defined and carries high values.

known properties, and are now being worked by Charles Caldwell of Kaslo. The ore is very high grade, and during winter a large amount of ore has taken out for shipment. There is 1,000 feet or more of drifting on the vein, and very good returns.

Adjoining these claims, on the same vein, are the Daniel, Scranton and Bird, owned by Kaslo people. The vein is very prominent through the claims, and on the Scranton is the biggest surface showing on go'd and 340 ounces of silver having been obtained from samples taken from showing. Also on the same vein is the Woodbury group, consisting of several claims and owned by an American com-pany, represented by Mr. Caldwell. From already been shipped, giving very high returns in gold, silver and lead. Development has been confined to drifting on the vein and will be prosecuted energetically dur confined to drifting on the vein

Further up are the Hill Top, Vernon Lucky Bill and Lucky Bill Fraction, Olds and several other claims, with very good showings. On the other side of the basin containing these properties is the Native Silver group consisting of four claims, and by J. P. Miller of Kaslo and others. Considerable work has been done on them, opening up a vein eight feet wide, with a paystreak eight inches in width. Native silver is very prominent the rock, and assays as high as 7,000 ounces have been obtained, and have gone lower than 250 ounces. Eighty feet of a tunnel has been driven on the vein, in ore all the way, and a crosscut run to determine the width of the vein

It is a dry ore proposition. This brings the traveler to the head of the creek, and over the summits is Camp ansfield, where work already done has shown that the Saw Tooth range does not cut off the belt of rich ore. All the properties on the creek are easy of access, very good trunk trail following the creek o its head. Some day Woodbury Creek will be known as one of the greatest ore producing districts in the province, and haslo will reap rich benefits therefrom.

Shroeder Creek. Among the many mining districts tribu tary to Kaslo which give promise of being opened on a large scale in the near future is Shroeder Creek, a few miles up the lake from this city. It is about two years ago that showings carrying consider On one of them a winze has able value were found, and the discovery led to the staking of all the desirable showing has been made. It has the rich ground. Energy, thus far, has been chiefly Silver Bell lead. A group of claims adjoin- confined to assessment work, although on ing the Cork, and owned by Messrs. H. some claims considerable work has been Giegerich, Chas. Dickson, J. P. Miller and done The claims are almost entirely R. B. Briggs of Kaslo, will be worked in owned in Kaslo. The showings are of sittle spring. They have the Cork lead, ver-lead, with wide, well defined leads. and the work already done has opened The district is easy of access, the creek a fine showing of concentrating ore. The brovides excellent water power and timber Liberty Hill group, across the creek, is abundant. The group upon which most now mixed up with litigation, but when matters are straightened out men will be put to work. The showing is very promitted by the showing by the showing by the showing is very promitted by the showing by sing and among the best on the creek. all of them the vein has been traced. On reason to believe that the one claim 120 feet of tunnel has been Black Fox will also be worked again this driven and very good ore encountered in year, as development on adjoining claims the last 25 feet. On another claim 50 feet has proved it to have a very rich vein. of a tunnel has been driven on the vein, which shows from 8 to 18 inches of solid galena. It has assayed 64 per cent lead per. Active development work will be proceeded with this spring.-Kootenaian.

Blacks That Hold 'I'll The Goods Are Worn Out.

THREE SPECIAL

Black is the most useful of all colors and is more worn today than ever before Any color that is now faded and rust be dyed over a rich and deep black The three blacks-Diamond Dye Fast Black for All Wool, Diamond Dye Fast Black for Cotton and Mixed Goods and Diamond Dye Fast Black for Silk and Feathers, are all guaranteed not to fade or wash out. These wonderful Black dyes are simple and easy to use, and no experience is needed to do good work with them; a child who can read the di rections can dye successfully with Diamond Dyes.

When you decide to do your dyein work at home, be sure and buy the Dia mond Dyes. Beware of the cheap and adulterated dyes sold by some dealers for the sake of extra profit; their us means ruin of your materials and gar

The tion had always been pu and used for the purpo the notices in question

the purpose of perus when it would be necessa this being the case, it se fectly clear that I cannot Mr. Galt further urge have been specifically no and place when the p the commissioner at Ne carried on. This is a difficulty but in my opin make this necessary. the Act applies to every is to be made either to missioner of lands and gold commissioner, and i the application for the missioner or other per existing rights and recor mine owners and also as plications.' Now, Mr. Da contended that section

place, and the assistant himself would necessarily

of the building, and t

which does in terms, prov parties in interest, cann reference to the record proceedings to obtain wunder sections 13 and 4 do not at present thin proper construction of all events it seems to me missioner is to have reg sons mentioned specifica this means that they are appear before him on t that they are singled eral public in regard to ing up of the notice

that they must in some the opportunity of urging have, or may think they ussioner, without telligable to me, how
