THE GERMAN **EMPEROR**

Only Man Who Knows If Britain

So Said Admiral Seymour Before Leaving New York.

Dramatic Incident at Dinner In New York.

New York Oct. 9.-Admiral Sir Edward Seymour, of the British navy, when asked yesterday about a report that the German warships now brought over flags captured in the Franco-Prussian war to carry in the Hudson-Fulton military parade, re-plied that he did not believe it.

"In my experience with the Germans in all parts of the world," he said, "I have always found that they strictly observe the proprieties."

Asked whether he thought there was any probability of a war between England and Germany Admiral Seymour replied that the German Emperor was the only person who could answer that question satisfactorily. Personally he hoped not because war to-day meant a great loss of life and expense which must be met by taxation, and in his opinion it was wrong even to discuss opinion it was wrong even to discuss publicly the likelihood of war between

"Do you think that Germany is pre-paring for war?" he was asked.

When the applause subsided Sir Edward continued: "As an Englishman," he said, "I am anxious to see the English navy all that it should be, Der Grosse Admiral is rightly anxious to see the German navy all that it should be. When It Blew Up.

New York, Oct. 8.—Nearly a square mile of the middle west side was shaken yesterday by a series of sewer explosions which blew manhole covers high in the air, injured several persons, did considerable damage to property, and caused a moment of sharp panie.

Portable Electric Bath.

Portable Electric Bath.

An electric-light bath outfit invented by a French army surgeon and designed to be used in private homes or army camps, is described with illustration in Popular Mechanics. From a medical standpoint such baths are considered of great value, especially in European medical circles, but the ordinary apparatus is too cumbersome for other than hospital operations.

This apparatus is small, light, simple, and easily portable, consisting of two jaws which open and close upon a hinged joint. Within the two curved receptacles thus formed are placed three electric lamps of variable intensity, evolving altogether an intense light and a powerful heat. Owing to the shape of the apparatus it can be applied to any part of the body.
