### Railway News

Montreal—It was announced at  
the head office of the Canadian Pa-  
cific Railway, 1000, Street  
Station here, that free transpor-  
tation would be granted by that Com-  
pany to all relief supplies for the  
sufferers from forest fires in the  
Northwest Territory when consigned  
to the Cobalt Relief Commission, at  
Cobalt, Ontario. These supplies will  
be accepted by the railway at any  
point on the Canadian Pacific sys-  
tem, and will be rushed forward  
without delay.

Winnipeg—From September 1 to  
October 5, the C.P.R. has marketed  
63,272,864 bushels of grain, accord-  
ing to a statement issued at the local  
office. During the same period  
35,484 cars were loaded, which is the  
equivalent to 51,180,789 bushels.  
The previous highest figures re-  
corded were in 1915, when the com-  
pany marketed 32,023,000 bushels  
and loaded 22,472 cars, which is  
equal to 29,887,760 bushels.

Penticton—After more than a  
quarter of a century of service on  
Canadian Pacific boats on British  
Columbia inland waters, Capt.  
George Robertson made his last trip  
on Saturday, and when the Siam-  
mouth tied up at the Penticton dock  
that evening the captain passed  
down the gangplank for the last  
time in an official capacity.

Captain Robertson is from now  
on a fruit rancher, and he proposes  
to a statement issued at the local  
office. During the same period  
35,484 cars were loaded, which is the  
equivalent to 51,180,789 bushels.  
The previous highest figures re-  
corded were in 1915, when the com-  
pany marketed 32,023,000 bushels  
and loaded 22,472 cars, which is  
equal to 29,887,760 bushels.

Halifax—The many friends in  
Halifax and Dartmouth will be  
pleased to learn of the success of  
Edward Everett Beck, formerly of  
Dartmouth, but now residing in  
Vancouver. Mr. Beck is a son of Mr.  
Beck-Lindard, Dartmouth. He has  
been appointed to the Hotel Van-  
couver. Mr. Beck is a stockbroker, Mr.  
Beck has seen the Hotel Vancouver  
grow from a small brick building to  
the present fifteen storey fireproof  
structure.

Famous men and women from all  
parts of the world have been cared  
for by the smiling official during  
his service with the company.

Winnipeg—September records of  
the handling of the season's crop af-  
ford a remarkable demonstration of  
efficiency in grain handling by rail-  
roads, elevators and by the human  
element that plans and directs.  
Compared with other years the  
September movement far surpasses  
all previous records. All over the  
west long trains are carrying the  
current of wheat to the lake front  
and thence to the markets of the  
world.

Feeding the transportation routes  
are thousands of threshing outfits  
which during the recent few weeks  
have been operating in every dis-  
trict from early morning until dark.  
A summary of the Winnipeg in-  
spections shows the magnitude of  
the movement as compared with  
1921:

	Sept. 1922	Sept. 1921
Cars of wheat.....	39,344	26,756
Oats .....	919	1,590
Barley .....	2,981	1,638
Flax .....	52	89
Rye .....	2,027	469
Total .....	44,456	30,463

Calgary, Alta.—Many farmers in  
the irrigated districts in southern  
Alberta have every reason to be sat-  
isfied with the result of their sea-  
son's work, according to G. H. Hut-  
ton, superintendent of the agricul-  
tural and animal industry branch  
of the Canadian Pacific Department  
of Natural Resources in Calgary,  
who has returned after a visit to  
that section of the province. The  
yield of wheat has been most sat-  
isfying, in some cases averaging  
thirty-seven bushels to the acre.  
One man in the Coalville district had  
realized a net profit of \$6,090 from  
425 acres.

In the Vauxhall district one of  
the farmers had informed Mr. Hut-  
ton that he had purchased with  
100 steers, 5,000 lambs and from  
twenty-five to thirty dairy cattle,  
and that he had even then  
200 tons of hay for sale from one  
section of land. Incidentally Mr.  
Hutton mentioned that the feeding  
of the lambs under contract in the  
irrigated districts was being consid-  
erably extended this year. The  
business promised to provide a most  
satisfactory market for alfalfa hay  
and coarse grain, and to involve a  
relatively small risk, inasmuch as it  
was possible to contract lambs now  
for spring delivery. The profits  
from that line of work, he said, were  
in marked contrast to those which  
were realized even under the best of  
conditions in the growing of grain  
alone on irrigated land.

### WALTERS THROUGH FOR YEAR

Gloucester, Mass., Oct. 26—Captain  
Angus Walters of the champion  
schooner Bluenose tonight declared  
positively that he would meet the  
Henry Ford, the defeated challeng-  
er, no more this year.

"We have won the cup," he said,  
"that is what we came here for. If  
the Henry Ford wins the elimination  
races next year and sails down to  
Halifax, we'll take her on again if  
we are the defenders at that time."

### THE STORAGE OF VEGETABLES

The storage of vegetables is not  
satisfactory in a great many cellars  
because the temperature is kept too  
high. There is a natural desire to  
keep the cellar warm, of course, be-  
cause this materially aids in main-  
taining comfortable rooms above.  
The warm cellar, however, par-  
ticularly if the floor is of cement, has  
a dry atmosphere, and vegetables  
wilt badly therein. On the other  
hand, if the cellar is warm and moist,  
growth and rotting are more likely  
to take place. The dry, warm cellar  
is favorable to the storage of squash  
and pumpkins only and not suitable  
for vegetables other than these. Tem-  
perature is really the prime factor  
in the successful storage of vegeta-  
ble crops. A temperature slightly  
above freezing will carry all vegeta-  
bles in fresh condition for the long-  
est period and with the minimum  
of loss.

It is wise to have the vegetable  
storage room separated from the  
main cellar. This should have con-  
nections with the outside through  
which a free circulation of outside  
air may be maintained, probably an  
open cellar window screened with  
cotton would be quite satisfactory  
until cold weather sets in, when, of  
course, additional protection would  
be necessary. A glass window hinged  
on the inside is closed after the  
first of December whenever neces-  
sary to prevent too low a tempera-  
ture, the cotton cloth still remaining  
on the outside for use in warm spells.  
Such a plan has been followed by  
the writer in storing the home supply  
of vegetables and has given every  
satisfaction.

The larger the quantity of vegeta-  
bles the better the ventilation re-  
quired. With a large quantity it is  
better to have separate openings for  
the cool air inlet and the warm air  
outlet, one at a greater height than  
the other, thus facilitating the free  
circulation of the air.

If the cellar is such that wilting  
of the vegetables is likely to take  
place because of the dryness of the  
air, a protection of sand or sawdust  
should be given them. There is  
little danger of wilting if a free cir-  
culation of outside air, thus keeping  
up the humidity, is maintained.

In the storage of larger quantities  
of vegetables additional attention to  
ventilation must be given. A large  
bulk of vegetables usually generates  
heat more quickly than it can es-  
cape. Consequently slatted ventila-  
ting shafts should be placed at re-  
gular intervals of about four feet to  
prevent possible high temperature  
and consequent rotting in the pile.  
Two five-inch boards for two of the  
sides, with eight inch pieces of laths  
spaced one inch apart for the other  
two sides, make a fine ventilating  
shaft for a root pile. This shaft is  
placed on end resting on the floor,  
the warm air flows readily to it and  
escapes thereby. Bins four feet  
wide made of five or six inch boards  
spaced one inch apart and nailed  
to each side of the upright studding  
will serve the same purpose and in  
addition will separate the various  
lots.

For onion and cabbage storage  
nothing seems to be as suitable as  
slat-bottomed shelves, one foot deep  
for onions and two foot deep for  
cabbage, placing about ten inches of

Always Assured.

onions or two rows of cabbage to a  
shelf.

Celery demands a cool and moder-  
ately dry atmosphere for best storage.  
The roots should be covered with  
damp sand and the whole so arranged  
that the sand may be watered  
occasionally in order to keep the  
plants from wilting. Four bunches  
together may be placed upright in a  
row, with sand covering the roots,  
and a space a foot wide left between  
this and the next row. This space  
affords a suitable path for watering.

In no case should water be poured  
on the plants as dampness on the  
foliage favors the development of  
rot. A good circulation of air is im-  
portant in order to prevent damp-  
ness on the foliage. An earth floor  
is much better for celery storage  
than a cement one; consequently a  
cement floor should be covered to a  
greater depth with earth before put-  
ting these vegetables thereon.

A small patch of parsnips should be  
left in the ground for spring use.  
These should be dug as soon as the  
frost is out and stored in a cool  
cellar with a covering of sawdust  
or sand.

Leeks may be stored in the same  
way as celery. A patch of this should  
be left also for spring use. It should  
be dug early and stored in damp sand  
in the same manner as advised for  
storing celery in the fall.

### Splendid Spirit Of Sportsmanship

Ottawa, Oct. 26—A telegram con-  
gratulating Captain Angus Walters  
and the crew of the Canadian de-  
fender Bluenose, was despatched to  
Gloucester tonight by the prime min-  
ister, Rt. Hon. W. L. Mackenzie King  
on behalf of the people of Canada.  
Premier King congratulated the vic-  
torious cup defenders upon their vic-  
tory and also upon the splendid spirit  
of sportsmanship they had shown  
during the contests.

### Negotiations To Be Resumed In Paris

Ottawa, Oct. 26—Negotiations for  
a new trade treaty between France  
and Canada are to be resumed in  
Paris by Hon. W. S. Fielding this  
week, it is learned here.

Mr. Fielding, who has just finished  
his work in London on the cattle em-  
bargo question, was expected to leave  
today for Paris to begin his trade  
treaty negotiations with the French  
government.

### Cobb Had Right Dope On Ruth

Ty Cobb is wise in all things per-  
taining to baseball.

Three years ago, when Ruth was  
the talk of the baseball world, the big  
est sensation the game has ever  
known because of his slugging ability,  
someone asked Cobb what he thought  
of the Babe.

"The big fellow is a wonder," re-  
marked Cobb, "but he has a big job  
ahead of him to keep the place in the  
public's eye that he now holds.

"Hitting home runs day after day  
is far more difficult than doing the  
things that I have done to keep my  
name before the public.

"My task is to make base hits and  
show some speed on the bases. Ruth's  
task is to keep on hitting the ball far  
ther than anyone else can.

"In order to continue doing that  
Ruth must take the best of care of  
himself. There must be co-ordination  
between the eyes and the muscles or  
the body. He must be able to time the  
ball perfectly.

"If Ruth takes on weight, increases  
his waistline, his natural swing is  
certain to suffer. His eye won't be  
right.

"I am afraid Ruth is going to get  
heavy. If he does, the pitchers will  
soon gain the mastery over him.  
When they do he is going to slip rap-  
idly. Ruth must be a well-conditioned  
athlete or his fame is going to be  
short lived.

### It Has to Pass Our Baker First

EVERY "milling" of Quaker Flour must satisfy our  
baker before it leaves the mills.

The wheat is analyzed by our chemists for protein,  
gluten and ash; the perfect grains are selected and  
cleaned. The product is tested at every stage of milling.  
A perfect flour is the result.

But the supreme test takes place in our own bakery.  
Every day's "milling" of Quaker Flour must receive  
the O. K. of our expert baker. It must produce bread  
perfect in size, flavour, colour and texture, before it can  
leave the mill. Nothing is left to chance in producing  
Quaker. You will make far better bread and cake with
