

"TRUST HER NOT"

Who believes in peace, or at least, anything better than a patched-up peace which Russia can demand at any moment it suits her? The history of events which preceded the Ormsman and the last Russo-Turkish war shows that when Russia was loudest in expressions of protest against her legions were already in motion and a conflict had begun. Before Russia there were few who believed that Russia would really reciprocate with peace, and that peace would be a permanent one. Since that horrid affair of the world has been for almost anything at the hands of property owners will not be so little alive to their own interests as to prevent against the measure, and thus prevent the city from receiving the benefit of a pure and sufficient supply of water.

A Question! To the Editor.—Can you inform the writer whether R. T. Williams, who was a candidate in opposition to the late election, is the R. T. Williams who lives on the north side of West street, and who, a short time since, put a second story on top of his face between his own and that of the widow Smith to cut the light from her window and harass the poor woman? The question is a disputed one, and the writer is desirous of knowing if it is the same person, or if so, that the public mind may be relieved of a suspicion which has been a source of annoyance to the community. It is reasonable to suppose that two hundred and seventy-four of the electors of this city would be found willing to endorse a man possessed of such an inhuman, not to say contemptible character as to annoy an elderly woman. My friend will have it that he is the same individual and we have decided to refer the question to you. Will you kindly answer? Yours truly, E. J. F.

Our quiet has the same means of ascertaining that the Colonel has. He can call upon the widow lady and ask for himself.—Ed.

"Society Items." To the Editor.—The Wharf street dude is making himself obnoxious again. Some people say that "Society" will shortly try the pump of cold water upon him when he is developing these ideas. He will discover what false prophecies those who have proved and how the British police have failed into fanned security by the utterances of the mouthpieces of British newspapers which unfortunately have succeeded in shaping the Indian policy of the "grand old man" into a policy of appeasement. At the same time the danger that Beaconsfield, with his wonderful precience, foresaw, Her Indian empire is in danger. If the Russian should succeed, by referring the matters in dispute to arbitration and by the terms of the arbitration, the British government will gain their object. The British will gain their object. The British will gain their object. The British will gain their object.

Sanitary Sense—Throw Physic to the Fishes. To the Editor.—I think it was a man of the name of Shakespeare who said that physic be thrown to the fishes; but that was a long time ago. It is now the duty of the British government to throw physic to the fishes. It is now the duty of the British government to throw physic to the fishes.

CLEVELAND'S SAYINGS.

Some of the Replies Which He Makes to Impertinent Office-Seekers. (Continued from page 1.) WASHINGTON, April 27.—President Cleveland's sayings have a striking resemblance to some of Mr. Lincoln's. Indeed, people are tracing wherein the two resemble each other. For instance, the other day half-a-dozen good and true Democrats from a Western State went to the White House to see the President about some office they had come for. There was perfect agreement among themselves, and all they wanted was to have Mr. Cleveland agree with them. Of his doing so they had a little doubt when he had heard them state their case. They were admitted and a hearty hand-shaking followed. Then the spokesman of the party spoke up: "You see," said he, "we're all Democrats and hard workers for the party, and concluded that these offices would be about the thing. We're all agreed about the business and would like to have it done up right soon."

Mr. Cleveland listened attentively at what they all spoke around. When they had done so he said to himself: "Are the men in the office not of good character?" They all said they were, and added: "But they are Republicans and we're Democrats. We don't want to give the office to a Republican."

"Are you prepared to charge them with anything wrong in office? Do they do anything that is not their duty?" They said they had nothing to charge against them only they were Republicans.

"You see," said one, "we all worked hard for the party last fall, and our district gave a larger majority than ever. We thought the office would go with the election, and so we've come for them."

"When will the terms of the incumbents expire?" asked the President.

"Two years," repeated the President, "immediately adding, 'Come and see me then!'"

Some of the office-seekers appeared at the White House and stated their case in about the same way as the others. They were Democrats, and had agreed among themselves who should have certain offices, but themselves of the incumbents of which would not expire for some time.

Mr. Cleveland heard them through, and then said: "I don't see anything but my promise to execute it."

To a Democrat who had written him a long letter, he said: "I don't see anything but my promise to execute it."

"There is a law bearing on the question, and I have had something to say myself about removals and appointments. You must make out your own case to Mr. Curtis. Neither seems to have received your attention and I will be glad to send you copies of both."

To a Democrat who had written him a long letter, he said: "I don't see anything but my promise to execute it."

THE RAILWAY IN THE DESERT.

Some Facts and Figures Showing how Work is Done. (Continued from page 1.) On February 14th the government decided to place in the hands of Messrs. Lucas & Aird the construction of the line from Skunkin to Berber. On the two possible routes the latter was chosen. Within a month of that date the material, plant and rolling stock of every description, with staff, gaugers and leading men for the laying down and completion of upward of 100 miles of railway of a foot 8 1/2 inches gauge, with 56-pound steel rails, have been shipped to Skunkin, and the railway has been begun to be laid. The material and transport required and supplied by the government, and the material gathered together and shipped within four weeks of the order, without a complaint about the speed with which the contract is being carried out.

Up to the present time eighteen vessels have started from different ports for Skunkin, each vessel containing staff, men and material sufficient to lay down its portion of the road. News has been received from the construction of the line has been actually begun, and that the coolies sent from India have arrived and begun to work with the native laborers.

The contractors have been able to give a complete list of the plant and material required for the 100 miles of railway thus shipped, and the minister of the interior has ordered the staff who have to superintend the construction, and for the men who have to lay the road. It will be seen that the order is not only a complete one, but that it is a complete one, and that it is a complete one.

Up to the beginning of the week, there has been shipped, as already stated, everything required for the laying down of the 100 miles of railway. In the first place we may put down 10,000 tons of 56-pound steel rails for the main line, and 2,470 tons of smaller rails for the gauge line, and for the temporary lines to carry materials, all these with fish plates and fastenings complete, and also 100,000 feet of wire for the main line, and 2,470 tons of smaller rails for the gauge line, and for the temporary lines to carry materials.

There are some charming novelties of white goods, such as embroidered mull and piques, pretty cross-barred muslins, and a variety of other goods, which are covered with dainty flairs. Breakfast caps when properly made are extremely pretty and popular. Some of the latest novelties are of a simple, but very effective design, and are made by small squares, and are made by small squares, and are made by small squares.

Spring Fashion Notes.

For dainty walking shoes French knit still holds the lead. The most appropriate materials for summer are, of course, unknown for years, if ever before. French crepes, richly embroidered, will be among the most appropriate materials for summer. "Jersey" gloves in silk are very fashionable. They have been so improved and are made with such care that they are perfect in color, quality and fit. Hats come in various fancy colors; indeed any dress fabric could be matched in braids, and they are so perfectly imitated that they are really beautiful. Oriental lace, especially fancy, are shown in all colors, with tinsel threads, silk heavy embroidery, gill, and some cases with wool floss embroidered on net.

The chemist is to be a special feature on summer dresses. It may be had either in plain linen or crepe lace, or embroidered with various sorts, or made almost entirely of lace. A Paris novelty is a laced glove, laced at the outside of the arm, and at the top a full circle of fine lace and the order is white and long and satin ribbon an inch and a half wide. One of the special novelties promised is a fancy hose with many colors interwoven, and which will be worn with garter or fancy colored garteries. They are described as combining the delicate shades found in such summer goods.

At some of our leading stores is the Spencer waist, Spanish jacket and standing collar, all in jet. They are worn with any sort of dress, and are particularly becoming to slight figures. Many of our most sensible women of fashion adopt for warm weather what they call the "cotton" dress. This consists of a silk vest and drawers, a satin corset, silk or fine Balbriggan hose, a petticoat of hair cloth and a thin, light, and comfortable dress. The latest novelty for Commencement dresses will be the serine of cambray, similar to that used for curtain draperies. Young ladies of taste will make their own dresses for themselves by running through the meshes alternate rows of pale-colored embroidery silk.

White will be used this summer for every occasion to which can be adapted. There are some charming novelties of white goods, such as embroidered mull and piques, pretty cross-barred muslins, and a variety of other goods, which are covered with dainty flairs. Breakfast caps when properly made are extremely pretty and popular. NEWFOUNDLAND FISHERIES.

Sir Ambrose Shea Negotiating for a Treaty with the United States. WASHINGTON, April 29.—Sir Ambrose Shea, representing the Province of Newfoundland, has been for several days with authority from the Imperial Government to negotiate with the State Department for a treaty that will give Newfoundland some of the advantages enjoyed under the fisheries clause of the treaty of Washington, which will expire on July 1st next. His visit, he thinks, will lead to favorable trade relations between the United States and the province which he represents. A representative of the Newfoundland imports commission, aggregating annually \$3,500,000, while her exports of fish and fish oil averaged \$274,000 per annum.

"Our fish products," he said, "have free entry into Canada, and already the Dominion Government has indicated that a continuation of this privilege depended upon our abrogation of the duties on their agricultural products, which now operate like upon yours and the order is white and long and satin ribbon an inch and a half wide. One of the special novelties promised is a fancy hose with many colors interwoven, and which will be worn with garter or fancy colored garteries. They are described as combining the delicate shades found in such summer goods."

Breakfast caps when properly made are extremely pretty and popular. Some of the latest novelties are of a simple, but very effective design, and are made by small squares, and are made by small squares.

Up to the beginning of the week, there has been shipped, as already stated, everything required for the laying down of the 100 miles of railway. In the first place we may put down 10,000 tons of 56-pound steel rails for the main line, and 2,470 tons of smaller rails for the gauge line, and for the temporary lines to carry materials.

There are some charming novelties of white goods, such as embroidered mull and piques, pretty cross-barred muslins, and a variety of other goods, which are covered with dainty flairs. Breakfast caps when properly made are extremely pretty and popular. PARTICULARS OF THE FORT PITT AFFAIR.

McLean and the White Settlers Killed Dozens of Indians. WINNIPEG, Man., April 23.—A despatch to the Hudson Bay authorities from Battleford gives a different version of the Fort Pitt disaster. It comes from the agent via Battleford. It states that Chief Factor McLean, with his family, staff, and other whites are prisoners, which cannot be made to indicate that they are being cared for by the Indians. It does not appear probable that McLean would willingly remain with even friendly Indians in preference to accompanying the police to Battleford, but it must be remembered that he has

A LARGE FAMILY OF CHILDREN, who are of too tender age to undertake the journey. He may, as indicated, now be safe under the protection of some kindly disposed band. The following is given as the manner in which Chief Factor McLean came to be in the Indians' camp:—When Big Bear took up his position before Fort Pitt Chief Factor McLean went into his camp to persuade him to give up the idea of attacking the Fort. McLean, like other H. B. Co. officers, had always been very influential with the Cree, and was well known to the Indians. It is said that he was so well known to the Indians that he was able to persuade them to give up the idea of attacking the Fort.

HE HAD NOTHING TO FEAR. Instead of treating with kindness, however, Big Bear promptly made him his prisoner, and then compelled him to write a letter to his friends inside the Fort, advising the civilians to come to him at Big Bear's camp as prisoners, rather than be killed in the intended attack on the garrison. The police were also told to lay down their arms and leave the camp to persuade him to give up the idea of attacking the Fort. McLean, like other H. B.
