Address: 49 Mountainview Road North
Georgetown, ON
L7G 4J7

Phone: 416-873-1813

Fax: 416-873-2813

Export Contact: Mr. Bernie Schatti, President

Marketing Profile

H & S Autoshot was established in Canada 17 years ago. The company has developed and now manufactures two major product lines for the automotive repair industry.

The first is the complete line of Uni-Spotter stud welding equipment. By using a Uni-Spotter stud gun the bodyman can weld a stud to a car's exterior allowing sheet-metal damage to be pulled from the outside without disturbing internal liners and fixtures. Additional tips have been developed to allow the welding of mold rivets to attach external trim, and to shrink high spots and "oil can" damage.

The line is completed with a variety of pulling tools and custom accessories. Uni-Spotter guns are hand-held and lightweight. They can be produced in either 110 volt or 220 volt configurations. There a variety of kits available: from the 4500 Starter Kit to the 9000 Deluxe Kit.

Their kits are currently used throughout North America. Kit accessories and consumables are normally distributed through paint, body and equipment warehouses with technical support available from their factory experts. H & S Autoshot also manufactures a complete range of fluorescent and incandescent work-lights.

The fluorescent work-lights are unique in that they are the only ones produced without a ballast, or resistance wire in the plug or cable. High power state of the art circuitry eliminates the cumbersome ballast.

A complete range of lights and reels is available for distribution.

Products/Services Available for Export:

Uni-Spotter Stud Gun Kits and Accessories
Superlite Work-lights and Reels
