Poetry, &c.

SATURDAY NIGHT.

BY DR. BROWNIN The week is past; its latest ray Is vanished with the closing day. And 'tis as far beyond our grasp Its now departing hours to clasp. As to call back that moment bright When first creation sprang to light.

The week is past; and has it brought Name beams of sweet and southing though And has it left some memory dear Of heavenly raptures tasted here; Although it no er return again?

And who would sign for its fetting?
We are but pilgrims born to mourn:
And moments as they onward flow
Cut short the thread of human wo,
And bring us nearer to the scenes
Where sorrows end, and heaven begins.

The above is the title of the leading article in Hunt's Merchant's Magazine for March. It presents many interesting facts in relation to the extent and productions of the British

East India possessions:
British India covers a surface of 1,000,000 square miles, being as large as the whole of the United States east of the Mississippi River, and contains a population of about 150,000,000. This immense extent of territory contains within itself, in boundless profusion, everything necessary for the maintenance of its imbabitants.
The first importation of cotton made into

The first importation of cotton made into England from India was in 1789; and it came not direct, but through Denmark and Planders, to the extent of 2,000,000 lbs. Since that period the importations into Great Bristain have increased to 100,000,000 lbs.—
Cotton is used in India not only for dress, but for carpets, curtains, beds, awnings, cushions, &c. The consumption of cotton in India is estimated at 750,000,000 lbs., exclusive of the amount exported

Flax is cultivated only for the oil which is extracted from the seed. In 1790 Sugar was sent from India to England, and reports were made to the East India Company by their England from India was in 1789; and it came not direct, but through Denmark and Flanders, to the extent of 2,000,000 lbs. Since that period the importations into Great Britain have increased to 100,000,000 lbs.—Cotton is used in India not only for dress, but for carpets, curtains, beds, awnings, cushions, &c. The consumption of cotton in India is estimated at 750,000,000 lbs., exclusive of

Flax is cultivated only for the oil which is extracted from the seed. In 1790 Sugar was sent from India to England, and reports were made to the East India Company by their agents upon the mode of its culture, and the importations which commenced in consequence amounted in 1817 to eighty thousand quence amounted in 1847 to eighty thousand

portance even in the earliest commencement of the East India Company, and grows luxuriantly from the equator to the thirtieth degree of latitude. The annual production of all the provinces of Bengal is about 10,000, 000 lbs.

Indigo was an article of considerable importance even in the earliest commencement of the East India Company, and grows luxuriaintly from the equator to the thritteth degree of latitude. The annual production of all the provinces of Bengal is about 10,000-000 lbs.

Silk is another great staple of India foreign trade, and is much used by the inhabitants. In 1792, the quantity of raw silk exported from India to Great Britain was 401,415 lbs and in 1829 it had increased to 1,385,756 lbs. At the present time it is estimated at 2,000-000 lbs. The total value of raw and manufactured silks imported into Great Britain from her East India possession is estimated at 88,000,000.

Opium is produced in great quantities, and prior to the disturbances of 1839 was an article of great and rapidly increasing export to China. Tobacco is produced in India in immense quantities, and almost every person smokes. It is an inferior quality, and very little is exported. The cultivation of teat is yet in its infancy, but it has been demonstrated that teas of a good quality can be produced there. India, including Ceylon exports 13,000 tons of coffee which is within 1000 tons of the amount consumed in Great Britain. At the present time Great Britain receives from India eight or nine million pounds of pepper, a great part of which is re-exported to other countries.

The rice and wheat of India, are both inferior to that of most other countries, probably on account of inefficient cultivation. The quantity of road exported from India is estimated at 6,000,000 lbs. Almost all kinds of European truit-trees succeed well in India.

The article from which we have gleaned these facts though somewhat lengthy, will richly repay a careful perusal —Rock Amer.

Affections.

From Parker Clearland, LLD., Professor of Chemistry, Materia Medica, Mineralogy, Geology and Natural Philosophy, Bronseick College, Maine, Brunswick, Aug. 9, 1848.

Messrs, Enw. Brinswick, Aug. 9, 1848.

I HAVE not till the present time found bester to devote any attention to the "Fluid Extract of Valerian," a bottle of which you were kind enough to send me a few weeks since. I have now sufficiently tested it, to satisfy me, that it contains the active medicinal principle of Valerian, in a purver, more simple and concentrated state, than any other preparation of this root, with which I am acquainted. From the great success which has a strended its use, I think the public may rely upon it as a very reliable medicine in all Nervous Affections, Hendache, Sleeplessness, &c. Permit me to add that it is important that the manufacturer estimated continue to prepare the Extract with the disame care as heretolore. With much respect, yours, &c. P. C. CLEAVIAND, M. D.
