

THE WARFARE OF SCIENCE WITH THEOLOGY

"The two noble volumes, packed with rare historical data and printed and clothed in the best style of modern typographical art, more than realize the promise of the earlier essays. The book is an invaluable record of the difficulties that biblical superstition has interposed to the advance of physical knowledge; a treasury of information concerning the progress of modern science, gathered with the most assiduous and patient research during a quarter of a century in the libraries, not only of this country, but of Europe also. The painstaking investigations and rare erudition it embodies, the broad field it has so diligently delved and gleaned, and the reverent Christian spirit it manifests, make it a monumental work, destined to become a classic authority on the subjects it has made its own henceforth. The previous works in this field such as Dr. Draper's 'Conflict of Religion and Science' and Professor Sheld's 'Final Philosophy,' must yield pre-eminence to President White's admirable history. The new book is far fuller and more accurate in its narrative, clearer in its treatment, and more judicious in its judgments."—*The New World*, London.

"It is a complete survey of the whole field of battle. . . . The chapters are full of striking interest. The author of these volumes shows that the warfare of science has never been with religion, but only with old errors that were confounded with it, and that the Eternal Verities become the more clear and sure as the ancient guesses which have been confounded with them are cleared finally away."—*London Daily News*.

"Such an honest and thorough treatment of the subject in all its bearings that it will carry weight and be accepted as an authority in tracing the process by which the scientific method has come to be supreme in modern thought and life."—*Boston Herald*.

"It is graphic, lucid, even-tempered—never bitter nor vindictive. No student of human progress should fail to read these volumes. While they have about them the fascination of a well-told tale, they are also crowded with the facts of history that have had a tremendous bearing upon the development of the race."—*Brooklyn Eagle*.

"A conscientious summary of the body of learning to which it relates, accumulated during long years of research. . . . A monument of industry."—*New York Evening Post*.

"So interesting as to enchain the attention at once and keep it enchaind. Concise as a history of the universe could be made, tabulated so that instant reference to a particular bit of history, theory, or biography may be had, it will be valuable as a lexicon relating to religious controversy."—*Chicago Times-Herald*.

"Dr. White knows much of science and he knows much of theology. But his point of view is that of a historian. It is this fact which gives
