### Valiant Protectors.

When the band is met unexpectedly the most exciting incidents often occur. At close quarters the mustangs break into a run, and the race is to the swift. Here, when there is no doubt that each one will strain every nerve, the stallion takes the lead and makes every effort to pilot his family out of danger. But let the rider succeed in getting among the escaping horses, swing his reata, and attempt to cut out some of the mares, and the stallion will turn instantly, and with open mouth, teeth gleaming, and mane flying, rush at the disturber of his family unity with fury. A wild stallion is a jealous guardian of his host, and with mouth open, threateningly, even when the pursuer is a couple of hundred yards away.

The captured wild horse is far from being easy to handle, and its usefulness as a saddle horse is doubtful. Under intelligent training at the hands of a skilled rider it may be tractable, and strength and endurance make it a valuable animal; but one that has a strain of viciousness will require close watching. The comparatively few that have been captured and broken for use have proved that they can withstand hunger and thirst to a remarkable degree, and will make journeys across the desert regions of the Southwest subsisting on foliage of bushes and bitter grass which the ordinary Western horse used on the plains cannot eat. While they may run at high speed for a few miles, the statement that they vie with the Arabaian blood is not true.
