THE FARMER'S ADVOCATE

QUESTIONS AND ANSWERS. Miscellaneous

INSURANCE UNDER MORT-GAGE

A holds a mortgage of \$1,700 on a \$3,000 farm. Is A entitled to hold the insurance policy? YOUNG FARMER. Ontario.

Ans .-- The indenture of mortgage probably contains the usual clause providing that the mortgagor will insure the buildings on the mortgage premises. In that case, A would be entitled to have the insurance money made payable to him as mortgage in case of a fire loss, and to hold the policy while the mortgage remains unpaid. But, if there be no such clause, and no other agreement that he should have the custody of the policy, he would not be legally entitled to it.

WIREWORMS.

I plowed 16 acres of sod, and sowed it in barley and oats, and the wireworm ate about one-third of it, and I sowed fall wheat in same field, last fall, and the worm ate about one-half of the wheat. What can I do to get rid of them? A. G.

Ans .-- Wireworms are usually most troublesome upon land which has been in sod for some time. The best way to deal with them is to adopt a rotation of crops in which the land will not be in sod more than two years. In the meantime, the best thing to do would be to seed down the wheat with clover, as this crop is less affected than the grain crops with the wireworm. After the clover, the land should be put in roots or potatoes, or some such crop; the land in this way should be rid of the worms, without serious loss of crop. H. L. HUTT.

SICK SHEEP.

Have a sick sheep. When first noticed it, she would eat all right, but seemed to be unable to get up without quite a bit of effort. Was this way for a couple of weeks; then could not get up without help, and was clumsy walking. Finally, quit eating, and refuses to get up at all. Does ot seem to be in any pain, except breath seems short, and breathing a little hard: bowels, apparently all right, and water same. Have been feeding on clover hay and oats, with plenty of water and salt. A. L. H.

Ans.-It would be difficult to name he ailment in this case. It is not stated whether it is an in-lamb ewe. If o, it may be a case of dead lambs, and the case would be hopeless. A purgative of three or four ounces of Epsom salts, and a dessertspoonful of spirits of nitre, given carefully as a drench, or a half pint of raw linseed oil, instead of the salts, is usually given in the case of a sick sheep.

BITTER MILK.

Jersey cow has been milking seventeen months. Milk gets bitter when one day old. She gives three quarts milk per day. Milk twice a day Feed on clover hay

BROS.

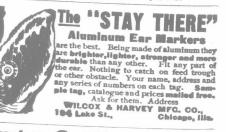

and barley chop three quarts of chop in a pailful of warn, water, three times per day. She is in good order, and will come in about the middle of June. She hasn't been out of her stall since winter set in. A. N.

Ans.-Bitterness, developing in milk when twenty-four hours old, is invariably due to the growth in such milk of some hacterium or yeast; it would not be possible to say which without an examination of the milv itself. There are a number of different bacteria, and at least one species of yeast, which have this property of froducing bitterness. The source of daily seeding of the milk probably lies a some of the dairy utensils, though the germ may possibly be derived from the eats, growing just within the teat opening It would be adviable to thoroughly clean all dairy utensils, pitchers, etc., and sterille them by boiling, or by a prolonged use of boiling water. Also thoroughly cleanse the milk shelf, and keep the milk on the shelf away from other foods. If, after repeating this for three or four days, the bitterness continues, it is safe to assume that the infection comes from the cow. In such a case, it would he found almost impossible to get rid of the trouble, though if the cow is dried, she probably will be free from the infec tion when she starts milking again.
