Good Fruit.

The most successful fruit growers of the Annapolis Valley have for years followed the practice of applying Marlate of Potash mixed with Basic Slag and Bone Meal, or other Phosphatic fertilizer, to their orchards, depending on a crop of clover to supply the necessary Nitrogen and Humus.

There is no doubt that the adoption of this ideal system is directly responsible to the remarkable color and quality of Nova Scotia apples, which features have gained for them so many awards and established their enviable reputation in the markets of Britain.

We can supply you with all high grade fertilizer materials, Potash, Nitrate of Soda, Acid Phosphate, Basic Slag, etc., at lowest prices. You can mix these yourself at home and save 25 to 40 per cent. in fertilizer cost.
