

from the absolute amount of space represented by these numbers; and also by such amount of space being represented in terms of these particular unit inches of the Great Pyramid, of which 500 millions measure of the length of the axis of rotation of the earth.

Thus, if 116.26 be multiplied by the quantity which the best of modern exact science has computed to be the particular fractional number for squaring the circle, viz., the proportion of the length of the diameter to the length of the circumference of a circle, or 3.14159, &c., the result is 365.24, or the number of solar days and parts of a day contained in a solar tropical year as ascertained by modern astronomy very exactly, but always egregiously blundered at by ancient astronomers even 2000 years after the day of the Great Pyramid.

Again, it has been found that that ante-chamber floor stands on the fiftieth course of masonry forming the whole Great Pyramid, from its base upwards; and if we multiply 116.26 inches by 50, we have for the result 5813 0 inches, or the ancient vertical height of the Great Pyramid as derived from the mean of all the direct measures of it.

And again, if we multiply 103.03 inches by 50, we have 5151.5 inches, or the length of the side of a square, which is exactly equal in area to a direct vertical section of the Great Pyramid; or again, to a circle having the vertical height of the Great Pyramid for a diameter; exhibiting, in fact, another form of the problem of squaring the circle, and a form which is essential to the computation of the power of every steam engine presently working in Great Britain, but which the ancient profane and idolatrous Egyptians, Greeks, and Romans knew nothing, or next to nothing, about.

To be continued.

ISRAEL MUST HAVE JACOB'S STONE.

WITH THEM.

IDENTIFICATION THE TWENTY-SIXTH.

The Identity is really an important one. We have a stone which, long before our identity with Israel was thought of, has been known for years and years as "Jacob's Stone." It is an object of interest to thousands who visit Westminster Abbey, as seen under the Seat of the Coronation Chair, the Chief Seat of the Empire, and ever since its introduction to this country it has been used in the Coronation Services, our Queen being the last who was crowned upon it. Its history is historical, giving us another of the very many historical proofs we possess in support of our identity. It was taken to Ireland by Jeremiah and Baruch at the time that they took Tephthai there, and re-planted the kingdom of David. It was received into Ireland under the name of the "Lia Phail," signifying a "precious stone," or, as the word "Phail," which is Hebrew, implies, "The Stone Wonderful." Tephthai herself, who became the Queen of Leathaid, was crowned upon it; so were all the monarchs from Fergus the First of Scotland, who had the stone taken there, and so were all the monarchs from Fergus to James the First, and from James the First to Victoria; and should there ever be another coronation with us, this "wonderful" stone will inevitably be used. Dean Stanley, who may be accepted as an authority upon this point, says of the stone in his "Memorials of Westminster Abbey," "The chief object of attraction, to this day, to the innumerable visitors of the Abbey is, probably, that ancient Irish monument of the Empire, known as the Coronation Stone."—p. 66. So that, as Israel must have with them a precious stone, it is interesting to know that we have such a stone; hence an identity.

Some of the Irish have said that the original stone brought by the prophet is still there; and Dr. Petrie points to a stone now in Ireland as being the one, which is nonsense, because the stone so shown is 14 tons in weight, too heavy for the ships of those days. Moreover, the ship bringing it from the east was disabled on the coast of Spain. The King of Spain, hearing it was a ship of "goodly store," seized the stone; whereupon, when the ship was properly caulked, two men (Jeremiah and Baruch) regained the stone, made off with it to the ship, and escaped. Had it been this 14 ton stone, two men could not have done it, by any means of transit in those days. Its shape, weight, and visible use
