MAKING CONCRETE BEE HIVE

By G. A.

In making concrete stands, I decided to range in pairs. All between the two hi sary to make the blo As I was replacing fence which had do twenty years, I took inch boards and cut Two of these were trough style, or at a "board" on whiel the concrete, as mai length I happened to as would, when place about four feet wide, I placed four cross side of this was na inches wide—although done as well. These I not only make a board," but they al for each mold, as a placed on each side. placed the narrow p has to be some way the right way up. better for this than a each end, on each side the molds of one-wic side will be wider than is an advantage in placing the molds I wa to keep the narrow s having the wide side narrow side of the one
