5. We need in most countries urgently to reduce public borrowing; where our circumstances permit or we are able to make changes within the limits of our budgets, we will increase support for productive investment and innovation. We must also accept the role of the market in our economies. We must not let transitional measures that may be needed to ease change become permanent forms of protection or subsidy.

6. We see low and stable monetary growth as essential to reducing inflation. Interest rates have to play their part in achieving this and are likely to remain high where fears of inflation remain strong. But we are fully aware that levels and movements of interest rates in one country can make stabilization policies more difficult in other countries by influencing their exchange rates and their economies. For these reasons, most of us need also to rely on containment of budgetary deficits, by means of restraint in government expenditures as necessary. It is also highly desirable to minimize volatility of interest rates and exchange rates; greater stability in foreign exchange and financial markets is important for the sound development of the world economy.
