

develop and programs were established to assist in its transfer to private industry. The federal government also assisted in Telidon sales and marketing.

Today Telidon has become the Videotex system of choice for several

major corporations. It forms the heart of the North American videotex standard adopted by the American Telephone and Telegraph Company. Time Inc. is using Telidon for its multichannel teletext service. The Government of Venezuela has purchased a Telidon network as a government information service, and Myer Communications of Australia uses the Telidon system for its international Videonet videotex service.
