

Issuance of Export Permits

Section 13 of the Act provides that:

"No person shall export or attempt to export any goods included in an Export Control List or any goods to any country included in an Area Control List except under the authority of and in accordance with an export permit issued under this Act."

An export permit is required before an item included in the ECL may be exported from Canada to any destination with the exception, in most cases, of the United States. However, twelve items in the List require permits before they may be exported to any destination including the United States, i.e.: 1001 - pancreas glands of cattle and calves; 1011 - endangered species (Appendix I or II); 2001 - logs of wood (of all species); 2002 - pulpwood (of all species); 5665 - scrap iron and steel; 5667 - Canadian one cent bronze coins; 8001 - source (fertile) and fissionable materials; 8005 - deuterium; 8039 - tritium; 8050 - radio-active materials; 8136 - nuclear reactors; 10011 - serum albumin.

Two additional items on the List require permits before they may be exported to the United States, i.e.: 1031 - sugars, syrups, and molasses, derived from sugar cane or sugar beets; 5664 - specialty steel products.

All goods originating in the United States that are to be re-exported from Canada require an export permit except any such goods that have been further processed or manufactured outside the United States, by combining them with other goods or otherwise so as to result in substantial change in value, form and use of the goods or in the production of new goods, unless the goods to be exported are listed in another Group in this List.
