

expansion of private investment in the mining sector. In the last few years, the largest countries followed by equipment have come by far from the United States, followed by Canada, Brazil, Japan, and the United Kingdom.

In the last few years, the largest countries followed by equipment have come by far from the United States, followed by Canada, Brazil, Japan, and the United Kingdom.

In the geological sector, the largest countries followed by equipment have come by far from the United States, followed by Canada, Brazil, Japan, and the United Kingdom. Some of the most important mining projects such as Placer Dome, Rio Algon, Escondido, and others are heavily involved in the exploitation of copper and silver. The largest projects in Chile are La Esmeralda, La Colipa, and El Teniente. This process has been growing rapidly in recent years, and we expect it to continue to attract foreign investment in Chile.
