

The "Brantford Sulky" has the best device for lifting out of the furrows whereby the hand and the foot both assist in raising it. All complications of a *horse-power lift* are done away with and a small boy can operate it with ease.

We are now turning out plows that we are not ashamed to place along side with the best *American as equal* in every particular, viz. : Material, Finish, Temper and Working. We use the very best American steel, fit in the most careful manner, temper all the working parts and guarantee our extras to fit well. Special care is given to plows for Manitoba. We have the best facilities in the Dominion for making good Plows and give our entire attention to their manufacture only.
