

ABOUT THE WINNIPEG MINE.

World's Representative Takes in Another Property in Wellington Camp, B.C.

THE ORE BODIES INSPECTED.

Deposits Tapped at the Surface and at the 50, 100 and 300 Foot Levels—Ore Values—Soon to Ship.

Pacific Mining Letter No. 13—Being the second relating to Wellington Camp, B.C.

At present the company employs about 20 men, but this force will be considerably increased in a short time—in fact, when the property begins to work, at least 100 men, as indicated, is expected to occur within 60 days.

The plant with which the property is equipped consists of a five-drill air compressor, a steam boiler, and a horse-power boiler capacity. The camp buildings include bunk houses, dining cabins, offices, shaft house, blacksmith shop and engine house.

On the Exchanges. A slump in Deer Park was a feature on the Toronto Mining Exchange to-day, with sales as low as 2 at the morning board, in the afternoon the stock strengthened up to 3 1/2, and closed at 4.

Who Owns the Winnipeg. The Winnipeg claim, which consists of 23 1/2 acres of land, was first located in 1893 by Mr. Duncan McIntosh, who staked it out on the adjacent outcrop of pyrite, which runs about 15 feet in width on the surface, and assayed \$39 in gold to the ton.

Property Carries Chutes of Ore. Generally speaking, the ore deposits in the Winnipeg camp like those of other Wellington Camp locations, in contacts of diorite and gabbro. The formation is roughly speaking, runs north and south, and dips to the west, and is broken up into irregular chutes, varying in width from a few inches to 15 feet, and in some places even wider. Near the surface the formation is much broken up, and a tremendous amount of prospecting work is required to ascertain the position and trend of the ore bodies.

The development work so far accomplished by the Winnipeg Company consists of two shafts, one down about 50 feet, with crosscuts and drifts, and the other about 225 feet, with crosscuts and drifts at the 50, 100 and 300 foot levels. In all work has been done.

One in Shaft No. 1. We first inspected prospecting shaft, which, for convenience sake, may be called shaft No. 1. This was sunk upon the outcrop of pyrite, which, as Mr. McIntosh first staked out the claim. The working, which goes down on an incline, remains in solid ore to the 30-foot level. At this level a drift is run for 90 feet to the east, and there is considerable ore in place here.

Returning to the shaft we descended another 20 feet to the 50-foot level. The ore chutes continue to this depth, and a drift driven in a westerly direction continues to the 50-foot level, where it intersects the shaft, at which point the working level is about 40 feet above the surface. This drift has been cross-cut and driven about 40 feet. This crosscut and upon for further sinking in the mine.

Returning to the surface, we descended the shaft No. 2. This main working of the property is run down vertically for 100 feet, at which point the management changed the direction to the incline in order to follow soft strata in the formation in which a small stringer of ore appeared.

At this 100-foot level 500 feet of drifting and cross-cutting has been done to tap what is apparently the same ore chute as that before described. The ore body is here irregular and much broken up, being five feet across at the widest part.

From the 100-foot level we descended to the 300-foot level, where Mr. McIntosh has driven a cross-cut in an easterly direction through altered gabbro. At a distance of 100 feet from the shaft an ore chute varying in width from one foot to seven feet was tapped. This deposit has been drifted upon throughout practically the whole of this working.

At the 300-foot level Mr. McIntosh has also driven west for 110 feet, and at this point he has cross-cut a chute of ore about

four feet wide. Upon this body he is now drifting. While it is the company's intention to continue drifting and cross-cutting upon several bodies, the management will continue sinking for at least another 200 feet.

Ore Values Obtained. On the Winnipeg claim the company has unworked two or three other outcrops. A prospecting shaft sunk on one of these to a depth of 45 feet unworked considerable quantities of ore.

Generally speaking, the ore upon the Winnipeg property may be described as pyritic, carrying gold and copper. It is partly high-grade and partly low-grade, running from \$4 or \$5 up to \$15, and sometimes higher per ton. Assay tests give even much higher values than the latter figure mentioned. A test shipment of about five tons of ore was some time ago sent to the Le Roi smelter at Northport, and a net return of \$75 per ton was secured.

Number of Men Employed. At present the company employs about 20 men, but this force will be considerably increased in a short time—in fact, when the property begins to work, at least 100 men, as indicated, is expected to occur within 60 days.

The plant with which the property is equipped consists of a five-drill air compressor, a steam boiler, and a horse-power boiler capacity. The camp buildings include bunk houses, dining cabins, offices, shaft house, blacksmith shop and engine house.

Thursday's Sensation

Will be... Pants

Regular \$4.00 for \$2.75.

You've been getting our story of extraordinary values in suits, overcoats and ulsters, and you've been taking advantage of the opportunity. We've been keeping quiet on pants lately, but we do not want this sale to close without an opportunity to buy pants—an extra pair is always useful—at prices just as extraordinary as those for other lines of our fine made-to-order clothing.

Our days are numbered. Look into the store and you will see carpenters and masons are crowding us at the far end. They will crowd us out soon.

MINING STOCKS

The vast amount of development work done during the past summer is already beginning to show in the increased ore shipments of B. C. mines, while Bullion has joined the list of Ontario dividend-payers.

D. F. MAGUIRE & CO.,

Members Standard Mining Exchange.

GRANITE AND BANNER

A steady bullion producer, and from our own examination recently made we believe the stock an unusually good buy.

RATHMULLEN, in Summit Camp, we also examined and can confidently recommend.

BOUNDARY HOMESTAKE, in Summit Camp, a most promising copper property.

REFERENDUM, near Nelson, is being equipped with stamp mill and chlorination plant. Now is the time to buy.

HALL & MURRAY, 12 Yonge St. Arcade.
