Something along the above lines should be worked out in Canada, with the creamery or cheese factory as the nucleus of the movement. The tester would make the factory his headquarters, and if the farmers were trusted to do the weighing of the milk and taking of the samples, it would be possible for one man to do the work for all the farms sending milk to the average factory. He would require to wish such would require to visit each farm before the test started; take note of all conditions, record the number, age, &c., of each cow, sampling should be done; lesve enough two ounce bottles with initials of farmer and number stamped thereon to take separate samples of two milkings, also blanks for illing in feed records every two weeks. Having thus prepared his patrons, they the sample bottles, of which the tester would
