SEALS AND SEAL-HUNTING IN THE NORTH ATLA.ATIC.

The word "fishery" ought to imply a
fifh" to be caught ; but the term has become perverted: for instance, we speak whale sponge, coral, cabl, and oyster, of
clam fisteries, yet none of these animals, in the least a tish. Neither is the seal, nt. lives. It is, indeed, nothing but a warmWooded, fur coated mammal, with all the
internal organs and outside structure of a quadruped.
On examining dingrauss of the bones in a
seal's flipper and an otter's fore les, you will find that you can match every hone of the thapes of the bones, to be sure, are altered to suit the varied uses of swimming in the
water and walking on the land ; but all the parts of the arm and hand also in the flipper of oursulject-only there hey are shortened, thick ched, and covered
a paddle insteaid of a paw.
Of course, being matumals these animals
must tireathe nir. You could drown any of must breathe nir. You could drown any of
them by forcing it to remain under the water too long. It is necessnry for them, there fore, in the arctic seas, where mainly is their spite of the sheet of thick ice which for half the year covers the whole ocean. But in
large bodics of ice there always are some holes, no matter how cold the weather may region an opportunity to come to the surface to breathe.
To the Evimos seals are of the utmost To the Eikimos seals are of the utmost
importance, and we may say that in many parts of the arctic world men could not live
without these animals. The annual southward journey of the
costless harp-seal furnishes a vivid picture of these great migrations which are so pro-
minent a feature of polar history. Keeping just alheal of the "making" of the ice, or
final freczing up of the flords and bays, a the approach of winter they leave Greenall the gulfs and bays. Arriving at the straits of Belleisle, some enter the gulf, but the great hooly move onward along the outward to the Grand Banks, where the a month, and then they turn northwand, slowly struggling again t the strong current that aided them so much in their southward journey, until they reach the great ice-field
stretching from the Labrador shore far east-ward-a broad continent of ice
During the finst half of March, on these great floating fields of ice, are born thousand of baby seals-only one in each family to be sure, but with plenty of play-fellows close by-all in soft woolly dress, white, or white
with a beautiful golden lustre. The Newfoundlanders call them "white-coats," In a few wecks, however, and a conar, coarse fur takes it place. In this uniform they bear the name place. In this unform they bear the name or three years later that the full colors of the adult are gained, with the black crescentic or harp-like marks on the back which give them the name of chaps. The squealing and barking at one of these immense nurseries can be heard for a very long distance. When the babies are very and go off in search of food, coming back frequently to look after the little ones; and although there are thousands of the small, White, squealing creatures, which to you and all are moving about more or less, the any bleating baby until she has found her

Those seals pursued by the Eskimos, ar rot the species that make the great south but the ringed seals (Ploca futida) which remain on the far arctic coasts all the year almost their entire dependence for food, fuel hight and clothing seals creep winter each of the femal which is named attuks) the breathing-hole snow overlying all the jee-field the deep cave, eight or ten feet long and three to five feet wide. At one end of the exceration
the breathing-hole, affording a ready means arctic natives make their summer clothing, as shoe-leather, and as covering for knapof retreat in care of danger. In this cave
while under marments their summer clothing
those of the young netwick. Children often
hav from the sight
The old fashoned native manner hunting-some of the Eskimos now have
guns, and this spoils the interest-called for guns, and this spoils the interest-called for
much vill and patience. In it, each hunter has a trained dog which runs on ahead, but is held by a strap, around his neck from going too fast and far. The dog scents the al lying in its excavation under the snow
(the level surface of which of course gives no sign of the cave), and harks ; whereupon the hunter, who is close behind, hastens forwand, and ly a vigorous jump breaks
town the cover before the young seal can eseape. If he succeeds in citting off its retreat, it is an easy prey, for he simply knocks ceal-hook rery ; otherwice he must use his When the ice breaks up the Eskimos cat on out in their kayaks, the crankiest of
rimitive craft, on the uglicat of royages but this is an adventure they never shirnk and one that their acquaintance with Europeans has not clanged at all. The
kayak is eiphteen or twenty feet long, but kayak is eiphteen or twenty feet long, but
is so light that it can be carried by the one man who forms the crew. It is all decked over, excepting a little round hole through
which the young Eskimo squeezes his leg

The principal sealing-grounds are New Toundland, Labrador, and the islands which
he coast of Western Greenland ice-floes off
bergen and Jan Mrn Greenland, the Spitz
the White Sea, and the Caspian Sea
If the weather permit, the vessel is ru into the ice and moored there; if not i
eails back and forth in openspaces, managed ly the captain and one or two others, whit the remainder of the crew, sometimes sixt or seventy, or ev ${ }_{1}$ more in number. into boats and ricis swiftly to the floe. Th there, baiking seattered about here and the lee of a hummock, and they lie so hickly that half a dozen will often be seen in a space twenty yands square. They canabout, and their plaintive bleatings and White coats might almost be those of lamb The old seals are frightened away by th appronch of the sailors, and never show ght, and the youngsters are casily killed so the men do not take guns, but only clubs lows a single blow on the head usully kil ling them at once.

head of the hooded seal, or "gquare-flipper,"-"the species which shows fight,"
and sits down. Then he puts on a tight Having struck down all they an sec oil-skin coat over his garments, and ties it within a short distance, the small squad of down to the deck all around him, so that no men who work together then quickly skin, water can pour in "tween decks," But, on or (as they call it) "sculp" them, with ore he cand he must untie the knots be- broad clasp-knife, cutting clear through the izes, he must either be content to navigate hide, and so leave a surprisingly small cat head down and keel up, or else must right cass behind. Bundles are then made of himself by a sort of somersault, which shall from three to seven "pelts," and each mat bring him up on the opposite side-and this drags a bundle toward the boat.

Whe often actually does. By night, after a "seal-meadow" has been When the kayaker catches sight of a seal, attacked, the decks of the vessel are hidden of advances within about twenty-five feet under a deep layer of fat, slippery pelts. | of it, and hurls the harpoon "by means of | After these have lain long enough to get |
