Very Promising **Mining District**

Mr. W. M. Brewer Back From a Visit to the Similkameen District.

Coast Cities Must Be Alive or They Will Loose the Trade.

William M. Brewer, mining engineer, has returned from a visit to the Similkameen district. In a conversation last

night he said: "The first thing that strikes a careful observer in going into the Similkameen country is that the people are entirely independent of the Coast cities, and that Victoria and Vancouver will lose all the business that will be developed there unless they get a short line of railway into the country before connection is established with Winnipeg and other points in the Bast, and Spokane and other points

in the South.

"The next thing is the attractiveness of the country for prospectors and the ideal conditions with regard to mining. In the Nicola and Similkameen valleys, besides in several places in the Otter valley, the district has its own granary, its own slaughter house, its own fruit

In the Nicola and Similkameen valleys, besides in several places in the Otter valley, the district has its own granary, its own slaughter house, its own fruit orchards, its own vegetable farms, its own dairies, its own coal and its own limestone. Consequently when the country becomes more easily accessible, mining will be conducted under much more pleasant circumstances and more economical conditions than are possible where everything has to be carried in.

"In Lower Nicola, near the head of the Nicola river, and about 1,200 feet in altitude above Spence's Bridge, we find the first ground prospected in this district south of the C. P. R. There is a coal field here that originally belonged to Garesche, Green & Co. The coal appears to be a good grade of bituminous, and I am informed by C. E. Law, of and I am informed by C. E. Law, of and I am informed by C. E. Law, of and I am informed by C. E. Law, of and I am informed by C. E. Law, of and I am informed by C. E. Law, of and Mill creek and the mountains forming the watershed between them, there have recently been discovered bodies of gold-copper ore. Between Nicola lake and the head of Otter creek is one of the finest cattle ranges to be found any in Montana. This range country is flanked by a chain of mountains which extends to the Similkameen valley, on the south side of Otter creek is one of the finest cattle ranges to be found any in Montana. This range country is flanked by a chain of mountains which extends to the Similkameen valley, on the south side of Otter creek is one of the finest cattle ranges to be found any in Montana. This range country is flanked by a chain of mountains which extends to the conditions and several locations have been made, all of them appearance of the palm of a man's hand with the ore bodies on Wolf creek treat the similar to fingers. "Kenned ymountain side was prospected. The first location was made by a man named Schmidt, from North Dakota, and is called the Big Sioux mineral claim. From reports I received I judge it possesses and on this the Tulameen river heads. In these mountains and seven miles from Otter Flat the first location was made during the past summer. I saw on Cousin Jack group some sulphides which are claimed to carry gold and silver values and a little copper. The work done is quite limited, but is sufficient to show an ore body lying between walls of schistose rock, and quite persistent. The International group, on the same mountain, is reported to show better prospects than Cousin Jack, but I had no time to visit it. At the head of the Tulameen river, prospectors during the past season or two have located claims carrying galena. Attor greek and follows.

'After leaving Otter creek and follow-'After leaving Otter creek and following the Tulameen down, we come to a tributary called Granite creek, where for several years placer operations were carried on, and where the supply of platinum produced by British Columbia was found. Two hydraulic plants are on the creek, but are not operated at present. I was informed that Professor Kemp, author of 'The Ore Deposits of the United States and Canada,' with Professor Johnson, of Boston, and a full assay outfit, has been in Granite creek district during the past summer

Professor Johnson, of Boston, and a full assay outfit, has been in Granite creek district during the past summer investigating for platinum. In the vicinity of the mouth of Granite creek the mountains are much more precipitous than in other portions of the district. Low-grade gold ores have been found, but in consequence of their small percentage of value the prospectors have done little systematic work, preferring to search for copper and galena ores.

"Near Otter Flat some prospectors claim to have located during the past summer a seam of coal which is of good coking quality. They claim to represent a strong syndicate, including some people connected with the C. P. R.

"Princeton is the principal town of the district, and at present it is a typical mining camp. It has a population of between 200 and 300, has four stores, three hotels, a livery stable, a black-smith shop, a newspaper, a real estate office and the government office. It is situated at the junction of the Tulameen

and Similkameen rivers. About three miles below on the Similkameen is the townsite of Allison, where there is a bridge across the Similkameen river.

"Opposite Princeton on the bank of the Similkameen coal measures crop out, and there is a seam of lighte six feet thick. This has been driven in on for about 60 feet, and at the face of the tunnel the coal is of much better quality than at the outcrop, and is equally thick. Judging from the outcrop, I think the dip of the seam is towards the south and west, and that the measure is con-

Several Hundred More Bobles Believed to Be Buried Beneath Wreckage.

than at the outcrop, and is equally thick. Judging from the outcrop, I think the dip of the seam is towards the south and west, and that the measure is considerably distorted. There are apparently three seams within a comparatively short distance below the surface. What value the field possesses is problematical, as no prospecting has been done away from the river, and it is of course unknown how far to the south and west it extends. At several points both on the Similkameen and the Tulameen there are outcroppings of lignite. "Following up the Similkameen river, we find it flowing between Kennedy mountain on the one side and Copper mountain on the other, on both of which there are a considerable number of locations made during the past year or two towards the head of the Similkameen. So far as the copper ore on Copper mountain is concerned, undoubtedly there is a very large tonnage of apparently low grade. The main mineralized zone appears to be about 2½ miles long and 600 feet wide. It has been determined by work done on the Sunset claim that the ore continues to a depth of 200 feet, by sinking an inclined shaft at an angle of 57 degrees to the horizon. At that depth contact was encountered between the feldsite and diabase which forms the gangue of the Sunset ore body. Water came in so rapidly that operations could not be continued at that level, and so the owners went to the 150-foot level, where, instead of drifting along the

amount available on either mountain is so small that steam power is out of the question, except by pumping water up from the Similkameen, and it would be much more economical to install an electric plant at the river and transmit the power to the summits.

Rev. Munro Somerville, B. D. Ordained Minister of Drumelzier Church.

The Kirkintilloch Gazette of August 25 contains the following account of the ordination of Rev. Munro Somerville, son of Rev. Thomas Somerville, formerly pastor of St. Andrew's church in this city:

WIDDSPREAD RUIN.

The city still presents the appearance of widespread wreck and ruin. Little has been done to clear the streets of the terrible tangle of wires and the masses of wreckage, mortar, slate, stone and glass that bestrew them. Many of the side walks are impassable. Some of them are littered with debris. Others are so thickly covered with slime that walking on them is out of the question.

visitors who had come from a distance received luncheon in the manse, where Mr. Lindsay Somerville, of Worcester. N. S., presided. It will be remembered that Mr. Somerville had a distinguished career at the university. After finishing the curriculum there, he travelled extensively in the lands of the Mediterranean and in the United States. He wields a ready nea and has written a good deal. and in the United States. He wields a ready pen and has written a good deal, chiefly on the subjects of his travels—universities, gold mines, Oriental literature, etc. He is said to be an interesting lecturer, and as he is to give his lecture on "The Homes and Haunts of Carlyle in Annandale' during the ensuing winter his theory are the state of the control of the

vative Leaders at Belleville.

Belleville, Sept. 14.—Sir Charles Tupper, Hugh John Macdonald and Messrs, Foster and Whitney were warmly welcomed here to-day. There were processions, bands, cheers, even the fire bells ringing out a cheer of greeting. They addressed a large demonstration.

Streets to their homes at nightfall, but the work of the patrol system is made into patrol system is made into longer possible to operate them. Attempts are being made now to get the cars in shape again. They addressed a large demonstration.

Relieving The Distressed The Distressed Train Loads of Goods Being Poured Into City of Galveston. Several Hundred More Bobles Political Carriages and cabs as a means of transportation, and the fieed of the feed of the trolley promises to become a most pressing one when re-building begins. Among the worst sufferers by the disaster were the churches. Nearly every one of them felt the effect of the storm. Some of them are entirely wrecked, beyond repair. The work of relief continues. Mayor Jones and his associates are bending every nerve to open a direct line of transportation with Houston, by which they may be enabled promptly to receive the great quantity of provisions which are now on the way to the city. CARING FOR THE NEEDY. Polats Out How Rull Carriages and cabs as a means of transportation, and the fieed of the feed of the feed of the rolley promises to become a most pressing one when re-building begins. To the E

back yards, squares away from where they originally stood.

Here and there business men have already put men to work to repair the damage done, but in the main the commercial interests seem to be mable to follow the lead of those who show faith in the rapid rehabilitation of the island city.

The appearance of the newspapers to day after a suspension of several days, is having a good effect and both the News and Tribune are urging prompt succoring of the suffering and then equal promptness in reconstruction.

It is difficult to say yet what the ultimate effect of the disaster is to be on the city. Many people have left and some may never return. The experiences of others still here were so frightful that all will not remain if they can conveniently find occupation in other cities.

PANIC IS TEMPORARY.

The bulk of the population, however, is only temporarily panic-stricken, and there are hosts of those who helped to make Galveston prosperous who look upon the catastrophe as involving only a temporary halt in the advancement of the city.

What is most bothering business men at present is what attitude the railroads, and especially the Southern Pacific, will assume with respect to reconstruction. The decision of the transportation lines, will do more than anything else to restore confidence. Ships rode at anchor in front of the city to-day. They had just reached the port, and found the docks and piers damaged so widespread that no necommodation could be given them.

They found sheds torn away, freight cars overturned, and planking ripped off.

The steamships reported ashore in early reports are, saving two, the Norwegian steamer Gyller and the British steamer Norma, still high and dry. No examination is yet possible as to the condition of those still on the sand.

A. Goldstein, the Vaneouver second in dealer who absconded on returning find dealer who absconded on returning many creditors, includings many creditors, includings many creditors, includings many creditors, includates the select of the select of the se

Chilliwack, Sept. 10.—Mr. Wells, of Ontarlo, is visiting Mr. and Mrs. Templer. E. M. Connors and Mr. Paisley have left for the Mount Baker district.

His Honor Judge Bole and Mr. Aulay Morrison, M.P., came down from New Westminster to attend the county court.

Mr. A. M. Nelson went to New Westminster with the largest shipment of farm produce that he has made for years.

Mr. Kincald addressed a public meeting at Cheam on the 8th inst., on the subject of the proposed cheese and butter factory. Messrs. Gillanders and Parsons, store keepers, are about to dissolve partnership. Messrs. Joseph and Samuel Gibson and Ernest Smedley have left for a prospecting in the state of the proposed cheese and butter factory.

The municipal council sat on the 1st inst. A petition was received from Mr. C. Turner and four others, the same being ap-

BALL PLAYER DEAD.

Eddie Knauft Dies in Philadelphia After a Lingering Illness.

Philadelphia, Sept. 15.—Eddie Knauft, a once famous baseball player, is dead of a broken back, after having lingered in a hospital here for three years and a half. His case is unique in medical history. After retiring from the ball field he became a fireman, and while on duty at a fire was crushed by a falling beam. From that day he lay on a cot in the hospital, and although many eminent surgeons interested themselves in his case, they could find no relief for the sufference of the Athletic Club when that organization won the American Association.
