

## VALGUS, Scriba.

A very small, brown species, *canaliculatus*, Fabr., (.25 inch), looking something like a diminutive *Osmoderma*, is our only representative. The thorax is distinctly channelled, the elytra very much flattened, and with indistinct yellowish or whitish markings across the middle and near the tip.

The following bibliography includes most of the more important papers in which the North American Scarabaeidæ have been treated in synoptic or more or less monographic form :
