

LOCK-LEVER SULKEY HAY RAKE.

This Implement is now almost indispensable where Mowing or Reaping machines are used. It rakes off the Meadow or the Stubble field in the most perfect manner, paying for itself, usually, in the course of one season.

The construction of my Sulkey Hay Rake is of the simplest description. The Teeth, made of the best quality of steel and thoroughly tempered and tested, are raised and lowered by a lever at the hand of the operator, who rides comfortably on his seat, having nothing to attend to but his horse. The Lever on my Sulkey Rake is so arranged that, when the Teeth are lowered, it locks itself, and remains so until it is operated by the driver to discharge its load. It can be worked by a boy with ease, and the spring on the teeth enable them to enter into the inequalities of surface and make a very clean job. For raking stubble fields it has par-
