

AN MAKE MEN SOUND AND STRONG

Treat Specialist Discovers Something Entirely New For the Cure of Men's Diseases in Their Own Homes.

YOU PAY ONLY IF CURED

Requires No Money Unless He Cures You. Method and Full Particulars Sent Free. Write for it This Very Day.

A Detroit specialist who has 14 certificates and diplomas from colleges of medical boards, has perfected a startling method of curing the diseases of men in their own homes, and so that there may be no doubt in the mind of any man that he has both the method and the ability to do so he

DR. S. GOLDBERG.

he possesses of 14 diplomas and certificates who wants no money if that he does not earn.

Dr. Goldberg, the discoverer, will send the method entirely free to all men who send him their names and addresses. He wants to hear from men who have suffered that they have been unable to get cured, prevalent such as sexual weakness, varicocele, gonorrhea, blood poisoning, hydrocele, inflammation of parts, impotency, etc. This wonderful method not only cures the condition itself, but likewise all complications, such as rheumatism, bladder or kidney trouble, heart disease, etc.

Dr. Goldberg realizes that it is one of the claims and another thing to him up, so he has made a rule to ask for money unless he cures them when you are cured he feels that you will willingly pay him a fee. It would seem, therefore, that it is to the best interests of every man who suffers in this way to write the doctor confidentially and pay your case before him. He sends the method as well as many booklets on the subject, including the one that contains the 14 diplomas and certificates, entirely free. Address him Dr. S. Goldberg, 208 Woodward Avenue, Room P, Detroit, Mich., and he will all immediately be sent you free.

This is something entirely new and well worth knowing more about. Write at once.

DENTAL.

A. HICKS, D. D. S.—Honorary Graduate of Philadelphia Dental College and Hospital of Oral Surgery, Philadelphia, Pa., also honor graduate of Royal College of Dental Surgeons, Toronto. Office over Turner's drug store, 26 Rutherford Block.

LODGES.

WELLINGTON Lodge, No. 46, A. F. & A. M. G. R. C., meets on the first Monday of every month, in the Masonic Hall, Fifth St., at 7:30 p. m. Visiting brethren heartily welcomed.

ALEX. GREGORY, Sec. F. D. LAURIE, W. M.

LEGAL.

Office lately occupied by Edwin Bell, Victoria Block.

Keep Minard's Lament in the House.

POPULAR ASTRONOMY.

New Amateur Observers May Study the Sun—The Sun's several Layers—Planets Visible in August.

These brief notes on the phenomena of the sky will be issued monthly, and are intended for those who, without making pretence to much learning in astronomy, are yet interested in the heavenly bodies, their appearance, nature and movements. writes "Astro" in The Globe. Events of note will be drawn attention to, and brief descriptions given of those features which, while old, are ever new and wonderful to the observer.

Observational astronomy is by no means limited to the hours of darkness. Every day almost we have opportunity to study that orb upon which we might well say, physically, we depend for existence, the sun. Ever since the telescope was first used to examine the heavenly bodies, the sun has been favored with great attention. In looking directly at it through any telescope, screen, or dark glass must be used. Various appliances, all somewhat expensive, are used to temper the brilliancy of the rays, but the amateur generally makes use of a piece of London smoked glass. Anyone who has a small hand telescope can view the solar surface by the projection method. Arrange your telescope at a window, so that the object glass is some inches outside the window and pointing to the sun. Let the window be covered with somewhat dense curtains or other opaque material. Then upon a sheet of white cardboard, placed a few inches away from the eyepiece end, an image of the sun some six or eight inches in diameter will be seen. The smaller the image the brighter it will be. The cardboard must be at right angles to the axis of the telescope. By adjusting the eyepiece the image can be made very sharp. Any spots will then be visible. One cannot say that the method is as satisfactory as that of direct vision, but it is an excellent one for small glasses. A record by means of sketches of the spots should be kept. Spots are now occurring more frequently than for some years past.

Few people have an idea of the enormous size of the sun. Its diameter is 865,000 miles. Were the sun placed at the centre of the sun, the moon, which seems far enough away, would be a little more than half way out to the visible surface of the sun. We say visible surface, for as a matter of fact the sun consists of several layers, the innermost of which (the photosphere) is the one we ordinarily see. Outside of this lies the chromosphere, a shell of incandescent gases, and outside of that again the mysterious corona. This last can only be seen during the few moments of totality at the solar eclipse. The chromosphere can be rendered visible by a clever application of the spectroscopic.

In the moon the amateur observer can find a never-failing object of interest. Even a small telescope will reveal features of her strange scenery. Look along the terminator (i.e., the concave edge of the crescent, or, waning, moon), and the detail, as brought out by the strong shadows, will prove highly interesting. The fifth, eighth and tenth days of the moon's age are especially fine time for moon-gazing. At present four of the major planets are visible. Venus is the brilliant star visible in the west in early evening; Mars is near the star Spica, in the constellation Virgo, and is seen in the west also in the early evening. Saturn is on the meridian on August 11, shortly before midnight. During that month he will be well placed for observation. Look for him in the constellation Capricorn. Jupiter may be seen about midnight as a brilliant star low down in the southeastern sky.

The present is a fine time to become acquainted with some of the summer constellations. On August 15, at 9 p. m., the following constellations may be traced: Overhead, Lyra, with the brilliant star Vega; Cygnus, sometimes called the Northern Cross; low down in the south-west will be seen Scorpio; in the west Libra and Serpens; and in the northwest Bootes and Corona Borealis. Due south, yet high up in the sky, is Aquila, easily recognized as a large V-shaped constellation. Immediately east of it is Delphinus, with its little diamond-shaped figure; and still further east Pegasus, with its great square, and Andromeda, with its slightly curved long line of three stars, one of these forming a corner of the square of Pegasus.

Full moon occurs on the 8th August, last quarter 16th August, new on 22nd, and first quarter on 29th. Of late a small, yet quite visible, comet has been crossing the northern constellations at a rapid rate. It is recognizable as a hazy patch of light. On July 23 it was close to Alpha Draconis. It will soon vanish, as it is very quickly nearing the sun. The writer, using a very low power on his three-inch telescope, saw it well several times in July, though the frequency of wet, hazy evenings greatly interfered with observations. It had a well-defined nucleus surrounded by a mass of dimmer material, and had a short, somewhat ill-defined tail.

The World's Railways.

The total number of miles of railway now open for traffic in the entire world is estimated at about half a million, of which over two hundred and twenty thousand are in North America, about a hundred and seventy thousand are in Europe, something less than forty thousand are in Asia, about thirty thousand are in South America, about sixteen thousand are in Africa, and something over fifteen thousand are in Australasia. In the list of nations the United States comes first, having 199,376 miles of railway (Bureau of Statistics figures at the beginning of 1902), other nations coming in the following order: Russia, German Empire, France, India, Austria-Hungary, Great Britain and Ireland, Canada, British Australasia, Argentina, Italy, Mexico, Brazil and Spain.

CURED LONG AGO BUT STILL CURED

S. Kernohan's Incurable Disease Cured by Dodd's Kidney Pills.

Five Doctors Agreed there was no Hope for Him, but He Has Been Strong and Well for Years.

Gelert, Ont., Aug. 17.—Special.—The wonderful cures by Dodd's Kidney Pills published almost daily, recall the case of Samuel Kernohan, of this place. It is years now since he was cured, but as he is still cured it is well worth recalling the facts, and Mr. Kernohan delights to relate them. "Some time in December, 1893," he says, "I was taken sick and laid up for fourteen months. During my confinement to my house and to my bed I was attended at various times by five doctors. Three of them decided that my disease was incurable. Floating Kidney, and two of them that it was Spinal Disease. All agreed on one thing—that my case was incurable.

"When my money was all gone, as a matter of necessity, and as my bed had only taken three boxes when I was able to walk about. I took in all eighteen boxes, when I was entirely cured and quite able to work. "Dodd's Kidney Pills are the best friend I ever found."

His Harvest.

"Young Briefly has only been admitted to the bar a week when he made fortune. He was caught in a railroad wreck in which forty people were injured."

"And he was one of those who got damages." "He was all of them. He got all the victims to retain him."—Philadelphia Public Ledger.

REWARE OF OINTMENTS FOR CATARRH THAT CONTAIN MERCURY.

As mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is tenfold to the good you can possibly derive from them. Hall's Catarrh Cure, of Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally and comes in Toledo, Ohio, by F. J. Cheney & Co., Testimonials freely furnished. Sold by Druggists. Price, 75c. per bottle.

Hall's Family Pills are the best.

When a man is under a cloud you can't always convince him that it has a silver lining.

"Cleanliness is next to Godliness." Dirt and depravity go hand in hand. This is just as true of the inside of the body as of the outside. Constipation clogs the body and the mind. Constipation means that corruption breeding in the body, poisoning the blood with its foul emanations, befogging the brain with its faint exhalations. Constipation is the beginning of more diseases than, perhaps, any other single disorder. The consequences of constipation are legion. Headache, pain in the side, shortness of breath, undue fullness after eating, coolness of the extremities, nervousness, indecision, lassitude, dizziness, flatulence, and a score of other ailments are directly caused by constipation. Cure constipation and you cure its consequences. The quickest cure of this evil is obtained by the use of Dr. Pierce's Pleasant Pellets. They are small in size but wonderful in result. They cure permanently. They contain no injurious ingredients. Use them. For 50 stamps it can be had in substantial cloth binding. Address Dr. R. V. Pierce, Buffalo, N. Y.

You can't convince the father of twins that there is nothing new under the sun.

TIED MOTHERS.

It is hard work to take care of children and to cook, sweep, wash, sew and mend besides. It makes a shop of the home—a shop, too, where sixteen hours make a day and yet there is much working overtime.

Hood's Sarsaparilla helps tired mothers in many ways—it refreshes the blood, improves the appetite, and assures restful sleep.

Man seldom speaks of a wife's devotion without getting in a good word for himself.

C. C. RICHARDS & CO.

Dear Sirs,—I have great faith in MINARD'S LINIMENT, as last year I cured a horse of Ring-bone, with five bottles.

It blistered the horse but in a month there was no ring-bone and no lameness.

DANIEL MURCHISON.

Four Falls, N. B.

Man will bow in deference to woman's opinions with a feeling akin to amusement.

Wash greasy dishes, pots or pans with Lever's Dry Soap & powder. It will remove the grease with the greatest ease. 36

Cleverness is a sort of genius for instrumentality. It is the brain of the hand.

The Customs of the Country.

There was once a Newfoundland fisherman—he chanced to be a Catholic—who in old age came to die. He had lived in debt all his life and, no doubt, had never once given his whole catch to the dealer who supplied him, but had wrongfully slipped many a quintal over the side of a rival schooner and traded it out on the spot.

"Send for Fawther Rafferty," he said. "Send immediate!"

He wanted to confess his sins, to be shriven and to depart in peace, but his old priest had been transferred to Trinity Bay. A young man, just back from Rome, was now the spiritual head of the parish.

"Sure, 'tis Fawther Codlin," they told him.

"Fawther Codlin's a fine young man—a clever young man, I doubt not, but 'tis old Fawther Rafferty I want to hear me confession."

"An' why?" they asked.

"Sure," the dying man gasped, "he knows the custom of the country."—Norman Duncan in World's Work.

Ancient Table Manners.

A description of a dinner given in 1350 shows that there has been a vast improvement in table manners since then. As a rule, one knife had to serve for two people, and often a bowl of soup was used by two persons. For this reason the party giving the dinner arranged his guests in couples, trying to place people together who would be congenial and not adverse to this common use of table appointments.

Spoons were seldom supplied to the guests, and the soup was drunk directly from the bowl, the latter usually having side handles by which it was held. In less refined company there were no separate soup bowls, only one large porringer, which was passed around to the guests in turn. The diners helped themselves to the pieces of meat they desired from the common dish with their fingers.

Napkins were considered a luxury, and were only provided in very aristocratic and wealthy families.—Philadelphia Inquirer.

Sponge Growing.

Sponges are cultivated in West Indian waters and the Mediterranean. In its natural state the bath or toilet sponge is fleshy and covered with a black skin. To obtain the light colored, horny and elastic skeleton, sponges are left in shallow sea water for several days in a staked inclosure until the rotten animal matter can be beaten out. For artificial cultivation a living sponge is cut into small blocks, about a cubic inch in size, with a portion of the outer skin on each. These, fixed to a frame of weighted trellis-work, are sunk into a few fathoms of clear water, where they flourish best on a bottom of green seaweed free from mud. In about seven years the cuttings grow into sponges of marketable size.

A Caustic Retort.

An Englishman of somewhat questionable reputation, who was criticising the American way of spelling, once turned to Maurice Barrymore, the actor, and said: "I'll leave it to Mr. Barrymore. Is it right to leave out the 'u' in such words as harbor, neighbor, honor, candor, etc?" "Well, about harbor and neighbor I am not sure," replied Barrymore, "but when it comes to honor and candor I leave you out."

Oranges and Tobacco.

"Did you ever notice," asked a well known physician the other day, "that men who eat oranges are not much injured by smoking? It is a fact. Orange juice has the faculty of neutralizing nicotine, and that is the reason. I have seen men weakened and even made ill by excessive smoking, and a few oranges were all that was necessary to straighten them out."—Philadelphia Record.

Cause For Pride.

Wanton—What's the matter, Blankley? You're all out about and your arm in a sling, as though you had been in a fight, and yet you look beaming and smiling over it all.

Blankley—The fact is I have all along thought my boy Harold a sort of muf, and the other day I undertook to give him some boxing lessons. This is the result of the first lesson. Oh, I'm proud of that boy!

He Was Competent Himself.

Bobby's father was breaking the news to him.

"How would you like to have a little brother, Bob?" he asked.

"First rate," replied the youngster cheerfully. Then he reflected a minute. "No," he said slowly. "I guess, after all, I'd rather have a sister. I'm a boy myself, you know."—New York Tribune.

Propinquity of Now and Then.

"Bigglesworth isn't addicted to drink, is he?"

"Addicted? Oh, no. Of course he takes a glass now and then."

"I see I must modify my question. Doesn't Bigglesworth let his 'now' blend with his 'then' a little too frequently?"—Cleveland Plain Dealer.

A Question of Courage.

Phyllis—Yes, he was paying attention to her quite a long time.

Blanche—Perhaps he hadn't the courage to propose.

Phyllis—Oh, I don't know. Perhaps he had the courage not to propose.—Town and Country.

An Obstinate Man.

"Is it true the jury disagreed in that murder case?"

"Yes; they say there was one blamed crank that held out for conviction the man who done the killing."—Chicago Tribune.
