PLAIN BLACK LUSTRE, 25c, 39c, 47c yard.

Detroit Street Car Employes Confident of Success.

BETTER PAY!

WILL ASK FOR

Results of Settlement Between G. T. R. Co. and Their Engineers and Firemen-Labor Notes.

DETROIT STREET RAILWAY MEN Detroit, April 4.—The executive board of the Street Car Employes' Association it today putting the finishing touches on the proposed new agreement with the company. The men will be more strenuous this year than last for a raise in wages. W. D. Mahon, international secretary of the Street Railway Employes' Association, smiles at the announcement that the street car company of Buffalo has "voluntarily" raised wages 1 to 2 cents an hour, as announced in the daily papers. The men were getting 15, 17 and 18 cents an hour, according to the length of time they had been in the service of the company, and the hours were from 11 to 14 a All winter long they have been strengthening their organization, and this spring issued a circular demanding 25 cents an hour, with 9 hours' work inside of 101/2 hours. "Voluntary raise," said Mahon, aimply to prevent the men insisting on the 25 cents. The Pan-American Exposition will soon be in full swing, and the men will be worked as never before. Twenty-five cents an hour is not an exorbitant price for the work that will be required of the motormen and conductors in Buffalo during the next six months.

THE G. T. R. SETTLEMENT.

Montreal, April 4.—The settlement of the differences of the Grand Trunk Railway engineers and firemen involves the reinstatement of several employes whom the brotherhood considered were wrongfully dismissed. Regarding the number of hours the men are to remain on their gines between this city and Island Pond and between Island Pond and Portland, it is stated that the company's officials

To the Lungs.

Do you go to Chicago to reach Quebec? No. There's a better and more direct way. Then why try to reach your lungs by way of your stomach? Don't. Better go straight to the lungs at breathe-in the healing, soothing vapors of Cresolene. The medicine your lungs quickly heal and your cough disappears. For whooping-

are willing to shorten the hours by engaging two gangs of men for each en-This arrangement, however, is contingent upon the company being able to make the change pay. All of the other differences were settled to the entire satisfaction of the men. STREET RAILWAYMEN'S UNION.

Buffalo, April 4.-A circular addressed to the street railway employes of the Buffalo, Leckport, Niagara Falls and Lancaster lines, announces that many of the men had organized a division of the Amalgamated Association of Street Employes of America, that a number of requests would be made on the Buffalo Railway Com-

pany. These include a 101/2-hour day. LATE COMERS LOCKED OUT.

Hazelton, Pa., April 4. — The 600 men employed at the Oneida Community of Coxe Bros. & Co. have been locked out. When the men went to the mines in the morning they were sent home again. The company wants the miners to report earlier for work, but the men refuse to do so. No move has been made for a settlement. INDIANS ON STRIKE.

Buffalo, April 4.—The Indians employed at the Pan-American grounds on the construction of the bark house, which will be used as the house for the Six Nations during the exposition, Buffalo, April 4.-The Indians emwent out on a strike. They caught the fever from their white brethren and struck without a grievance. They did not know what to demand, but just struck. This is the first Indian labor difficulty on record. When Capt. R. F. Lawton, who has charge of the work, arrived at the grounds, nothing was being done on the bark house. The Indians were all abed, and Peters, a Tuscarora from the Tonawanda reservation, informed Capt. Lawton that a strike had been declared.

"What do you want?" asked the cap-"Nothing just struck," replied Pe-

There are nine Indians at the grounds. Red Cloud, Old Jake and another, three red men from Canada, of-fered to return to work. The other six, who come from the Tonawanda reservation, will be shipped back there, and others will be brought in their place. The Indians were getting \$1 a day and

their board. LABOR NOTES. The striking stablemen of Newmarket, England, after a ballot, have de-cided to accept the trainers' terms,

and are returning to work. Employes of the Brooklyn Rapid Transit Company's elevated railway system, who have been in the service more than three years, yesterday received an increase of 15 per cent, making their pay \$2 58 a day. Three-year men will get 10 per cent and two-year

MEN FOR PRESBYTERIAN MINIS-

men 5 per cent.

TRY WANTED. Montreal, Que., April 4.—After con-ferring degrees at the Presbyterian College convocation last evening, Rev. Principal McVicar said, among other once. Just light the vaporizer and attention to the inadequate number things: "I think it proper to direct of men now in training for the ministry. Dr. Robinson, superintendent of missions in the Northwest, who has recently returned from Britain, reports in a printed circular sent me that in the theological colcough disappears. For whooping-cough it's simply perfect.

Vapo-Cresolene is sold by druggists everywhere the Vaporizer and Lamp, which should lest a life the Vaporizer and Lamp, which should lest a life the veriest skeletons. This is not our experience in Canada, but it is possible that we may be on the eve of a similar state of things, unless the spiritual life of the church is deposited by the veries of the veries of

DAIRY SCHOOL EXAMINATIONS

In Connection With the Ontario Agricultural College.

Good Percentage Passed of Those Who Wrote for Certificates-Interesting Results of Laboratory Work in Bacteriology and Chemistry.

The final examinations of the Dairy School at the Ontario Agricultural College were held on March 21 and 22. Fortyone wrote on the final examinations; 32 of these took the factory course, and nine the farm dairy course examinations. Over 70 per cent of those who wrote for the factory certificates have had experience in factories. Ten of the class were back for a second term. Owing to the high standard which is required for passing, not so high a percentage of students who attend the course write on the final examination as there would be if a lower standard were adopted. The standard is very much higher than that of any of the American colleges, as stu-dents who go from the Dairy School at Guelph find that they can pass the examinations without any difficulty at all after a course in an American school; and usually the students of the Guerph school take a very high rank or stand at the head of their classes. The management of the Central Dairy School, however, think that it is best not to allow men or women who have not the necessary qualifications to obtain certificates from the school. Thus, the standard is placed much higher than it would be if the future work which these students are likely to do was not taken into serious account when granting certificates.

account when granting certificates.

In addition to the regular work, as commonly given in dairy schools in the manufacture of cheese and butter, testing milk, etc., a distinct advance was made with the class that has just graduated, in laboratory work in chemistry and hacteriology.

ated, in laboratory work in chemistry and bacteriology.

In chemistry, members of the classes separated the different constituents of milk, and obtained a knowledge of the composition of milk such as cannot be obtained from lectures which may be given on the subject. They also tested the purity and solubility of salt. They made tests to distinguish milk fat from steer fat, or common fats. They determined the moisture in cheese and butter. In cheese they found that with a larger In cheese they found that with a larger amount of rennet than was usually used. amount of rennet than was usually used, there was less moisture than when the normal amount was used. This is contrary to the opinion of practical men on this question, who have always held that this question, who have always held that an increased quantity of rennet added to the milk increases the moisture in the cheese. In explanation of this difference of opinion and results, it was found that the solubility of the curây compounds was considerably increased by using a larger amount of rennet in the manufacture of cheese. The acidity of cheese made from washed and unwashed curds was also determined by the chemist, Mr. Harcourt, along with the students of the dairy classes, and it was found in the few tests which were made that there was not very much difference in the amount of acid in the cheese, what difference there was indicating a less amount in the cheese made from washed curds.

These are but samples of the work which was done by the dairy classes un-

which was done by the dairy classes under the guidance of Mr. Harcourt, the assistant chemist at the college.

In the bacteriological laboratory, under the direction of Professor Harrison, cultures were made and used in the manufacture of butter and claese, and the facture of butter and cheese, and the class had some valuable object lessons class had some valuable object lessons showing that the flavor of cheese and butter may be entirely changed by the use of a culture or starter. It also demonstrated to them the importance of using nothing but the very best flavored culture or starter when making cheese or butter. They also went to the stables and got samples of milk from cows where the udders were not brushed, and samples of milk into which halr had fallen; and they found that the number of germs.

they found that the number of germs was very large indeed. The fore-milk from the cows also contained a much larger amount of germs than the milk from later portions of the milking. The effect of pasteurization was shown, when t was determined that over 90 per cent of the germs in the milk were killed by pasteurizing.

It is hoped that these two factors of

dairy school instruction will be perfected before the session of 1902, as the scientific investigations made in the chemical and bacteriological laboratories are bound to assist the practical butter and cheese-maker; and the Dairy School can give them this training, which can-

can give them this training, which cannot be obtained in the factory, or in any other dairy school at present.

The literary society of the school has been most successful during the term. It has developed speaking and business ability, and the social intercourse has been beneficial in giving culture and retinament to the members of the classes. finement to the members of the classes

Pains in the Chest

Aggravated by a Tight, Hacking, Tearing Cou sh, Point to Bron chitis, a Forerunner of Consumption-Dr. Chase's Treat-

When it hurts to cough, and when each long breath brings pain and a tearing, burning sense on the chest, you may be sure there is a deep-seat ed cold creeping along the bronchial tubes towards the lungs. It is a common practice to neglect a cold until beyond the reach of medicine. It is on this account that consumption

claims so many victims. If you are anxious to obtain prompt and thorough relief for a cough, cold or any form of throat or lung irrita-tion you should lose no time in procuring Dr. Chase's Syrup of Linseed and Turpentine, which undoubtedly is the most effectual treatment obtainable While aiding expectoration, and clearing the throat and bronchial tubes, this preparation also heals the torn linings and allays the inflammation. Scores of thousands of families in Canada would not think of being without Dr. Chase's Syrup of Linseed

and Turpentine in the house.

The approach of consumption is marked by loss of weight and general weakening of the system, and in order to fight off disease the body needs assistance such as is best afforded by Dr. Chase's Nerve Food, the great blood builder and nerve restorative. Weakneas and debility from whatever cause they may be, are overcome by

the wonderful upbuilding effects of this great blood cure. Many a case of consumption has been cured by this combined treat-ment. While the linseed and turpen-tine heals the inflamed parts the Nerve Food revitalizes and reinforces the constitution. You can rely on this combined treatment as most efficient in the cure of la grippe and as a pre-ventative and cure for pneumonia and consumption. All dealers, or Edman-son, Bates & Company, Toronto. successful one, though the attendance has not been so large as in former years. The following are the results of the ex-
