mittee a departation to attend at the time to named.

The secretary read a letter from J. E. I. Martin, in connection with a proposed bill to create an irredeemable paper currency. The letter was first of all received and filed and copies of the bill was to be malled to each member of the League refused to be mixed up with what they condemned as an utterly hairbrained scheme, and voted to reconsider the resolution. C. H. Lugrin said that the proposal as made in the bill to buy railways and public works by means of bits of paper, was utter foolishness. The proposition was such a crazy one that the League should enter a strong protest against such foolishness. Either the League was to do good or it was not. C. E. Redfern said that it was well to discuss all matters brought before the League and in asking to have copies of the bill sent to them the League was not binding itself to anything.

During some discussion as to whether or not larm would be done the League if Mr. Martin's proposal was turned down, the chairman read extracts from the bill, and was valled to order by Mr. Redfern, who thought that he should not do so. Mr. Redfern's motion to have copies sent to all members was again put and carried by a vote of 7 to 6. members was again put and carried vote of 7 to 6.

vote of 7 to 6.

The secretary reported that the matter of the Cowichan valley survey had been brought to the attention of the government, and Hon. Mr. Wells did not wish to take the matter up until the return of the Premier. Mr. Dickie had promised on account of the citizens of Duncans that \$100 towards the survey expenses. The government had promised to pay two-thirds of the expenses and if the people of Victoria would make up the balance of the one-third the work of surveying the line could be put in hand this season. All the government wanted was the citizens of Victoria to take a hand and put it through as a matter outside of C. H. Lugrin moved that in the opinion of

C. H. Lugrin moved that in the opinion of C. H. Lugrin moved that in the opinion of the League that it was desirable to have a survey of the Cowichan valley from the mouth of the Cowichan river to Barkley Sound. This resolution carried.

The secretary said that it was only by reminding those to whom resolutions had been addressed that action on the matter might be had. This was the case with respect to the purchase by the government of boring machines to test the ore deposits etc.

A resolution was offered to allow a former resolution of the league re meters, etc., striking out all relating to meters, and an amendment offered by A. L. Belyea, that while expressing no opinion as to the use of meters that an increased supply of water was what was required in the city. P. C. McGregor offered an amendment that 500 or 600 meters be purchased and instaled. A third amendment was to stand the matter over for a week.

The first resolution objustments at

ter over for a week.

The first resolution eliminating the meter question from the report of the waterworks committee, C. E. Redfern said that no doubt if some men were put on to detect the waste of water it might not be necessary to put in meters. The water commissioner had told him that since the charges had been made in the matter of sewers, tanks, etc., there was a saving of upwards of 600,000 gailons per day. There would be no more complaint of short water this year, and with all these surveys it did not look as if there would be a want of water next year.

A. J. Morley deprecated the Leggacia see

A. J. Moriey deprecated the League's going into details—the best farey could do would be to treat the matter in a general way. He offered the following resolution: Resolved, that whereas it is clearly set forth in the report of the committee of the Voters' League on the water system, that the said system is not so constructed and constituted as to serve the city with manner possible, or to the best interests of all concerned.

Therefore, be it further resolved, that a full copy of the report be sent the municipal council and that they be requested to carefully consider the said report, its deductions and suggestions, and to lay before the raterpayers without delay a complete plan for placing the entire system on an efficient and economical basis, and prepare and submit a by-law for the carrying out of the same.

The system as at present constituted cost the city over \$6,000 a year more than it should. The water should be supplied to the people at actual cost, and pumping was done at all times that was not necessary.

DO NOT TRIFLE WITH

Sick and nervous headaches are amongst the worst ills of life. The man or woman who is subject to headache at irregular intervals, goes through life bearing a load of misery and wretchedness that is terrible to think of. Headaches as a rile, result from a disordered condition of the nervous system. Mental excitement, loss of sleep, bodily fatigue and disordered digestion are exciting causes. When the brain becomes tired and debilitated, the whole nervous system is weakened, and headaches result. If the liver is sluggish, the kidneys inactive and digestion deranged, headaches invariably follow. To cure and prevent headache, the nervous system must be strengthened and vitalized. The most persistent cases of headache, nervous feebleness and sleeplessness are permanently cured by Paine's Celery Compound; it is the great reconstructant of the nervous system. Mrs. A. H. Watson, Creemore, Ont., writes as follows:

"For many years I was sorely troubled with violent headache, so that at times I was completely prostrated and unable to attend to household duries. I started to use Paine's Celery Compound, and experienced immediate relief; and since using it I have not had a recurrence of the trouble. I consider Paine's Celery Compound an invaluable remedy, and will always be pleased to say a word for it."

SALMON HATCHERY

First Lot Received From Spawning Grounds Earlier Than Usual.

From Our Own Correspondent

Westminster, Sept. 9.—The government hatchery is now receiving the first lot of ova from the salmon spawning grounds at Silver creek, where the first run of sockeyes spawned. This is three weeks earlier than usual, and should make the run four years hence correspondingly earlier.

The intermediate lacrosse team have

the latter ship will then complete the laying of the cacle to Suva, Fiji.

Mr. Lucas, who is registered at the Driard, was seen by a Colonist report of last night, and furnished the foregoing particulars. He further informed the Colonist that the first sections of the Canadian-Australian cable have been completed from Queensland to Norfolk Island to New Zealand, 518 miles, and from Norfolk Island to New Zealand, 518 miles, and from Norfolk Island to Suva, 981, or 2,334 miles in all, which are now in working order. The laying of the remaining sections will be accomplished as speedily as possible, the contract calls for the completion of the work by December 31, but Mr. Lucas feels confident that the work will be finished well within the time, so that by Christmas Puck's boasted achievement, will be an accomplished fact, and Canada will have the honor of having initiated this greatest of modern undertakings.

Mesers, Peake, Clarke, Wittrick and Jas. Wilson, of the C. P. R. Telegraphs, sailed by steamer Willapa last night for British Columbia Fruit is Growing—Farmers

Prosperous.

Fruit Inspector Cunningham who arrived from Vancouver on the Charmer last night, brings very encouraging and satisfactory reports of the sale and shipment of home grown fruit on the Maindad. The importation of foreign-grown apples and plums has entirely ceased, the markets being well supplied by local growers. The demand for pears and prumes for Manitoba and the Northwest to the city tomorrow to meet the Colonia arrives there. They will return to the city tomorrow to meet the Colonia and Anglia carry serior of the Winnipez show prince the close of the winnipez show

Both the Colonia and Anglia carry since the close of the Winnipeg show, some hundreds of miles of cable over and these orders are now being promptly

Rockies low pressure areas have during the greater part of the week prevailed in the Northwest, but though occasional rain has fallen during the latter part of the week, strong winds and gales have occurred, yet the harvesting operations do not Light frosts occurred on the 3rd and 8th in Alberta and Saskatchewan, and on the 4th in Manitoba.

At Victoria 53 hours and 48 minutes of bright sunshine were recorded: the highest temperature was 71.1 on the 6th, and the lowest, 47.8 on the 8th; the rainfall was and the lowest, 44.0 on the 5th and 8th; and the lowest, 44.0 on the 5th and 8th; and the lowest, 44.0 on the 5th and 8th; and the lowest, 44.0 on the 5th and 8th; and the lowest, 44.0 on the 5th and 8th; and the lowest, 44.0 on the 5th and 8th; and the lowest, 44.0 on the 5th and 8th; and the lowest, 44.0 on the 5th and 8th; lowest, 42.0 on the 3rd; rainfall, .04 inch.

At Barkerville, highest temperature, 64.0 on the 8th; lowest, 42.0 on the 8th; lowest, 30, on the 7th; rainfall, 1.10 inches.

but a temporary affair. The buildings will be supplied with water from a lake across Bamfield creek, whence a pipe line is being stretched to the tower and reservoir, which will be part of the equipment of the station.

A NARROW ESCAPE. Colwood Hotel Threatened With Destruction by Fire.

The Colwood hotel had a narrow es-The Colwood hotel had a narrow escape from destruction by fire yesterday. For some time past Mr. Williams, who lives near the hotel, has been burning brush on his land, and yesterday a breeze sprung up and blew sparks from the brush heaps in all directions, setting fire to the tinder-like grass and undergrowth at several points. These small fires, fanned by the wind, speedily became one solid sheet of flame, which advanced with alarming rapidity towards the hotel. The flames rose thirty and forty feet in the air, and showers of sparks fell on the hotel and outbuildings. It was only by the very hard work of the people of the hotel and the neighbors who assisted them that the building was saved.

An alarm was sent to the city and the chemical engines were sent out with all despatch, but before their arrival the wind had fallen and the fire had been checked. A good deal of indignation is an despatch, but before their arrival the wind had fallen and the fire had been checked. A good deal of indignation is expressed in the neighborhood at the folly of burning brush at this season of the year, when the grass and undergrowth is so dry.

BEWARE OF SPORTSMEN.

From Nelson News. From Nelson News.

Ranchers along both sides of the Arm are taking precautions to have sportsmen prevented from shooting over their lands. In past seasons a number of horses and cows have been killed by eareless shooters not taking into account the tremendous carrying power of some of the rifles with which the yare armed, and residents along the lake are afraid of some child or adult being struck by a stray bullet, so notices prohibiting shooting are being posted on almost all the ranches along the water front.

The per capita debt of Canada in 1901 was \$49.83 compared with 22.08 thirty vears ago. Great Britain's debt is \$74. Victoria Clearing House for the week sage ago. Great Britain's debt is \$74. Victoria Clearing House for the week ending September 9, are: \$591,621, and the balances \$12,97; that of France, \$151 per capita; the balances \$126,601.

The War Eagle and Centre Star companies have expended a considerable appropriation in fitting up the plant for the tests now under way. The Spokane if all & Northern road has completed a spur into the works after some delay, and the first lot of ore to be put through the crusher was handled yesterday, thus marking the actual commencement of operations.

The vin has been proved from the surface to a vertical depth of about 1.000 feet, the navable portion varying

cars of mixed fruit have been wired for

some hundreds of miles of cable over and above the quantity actually required to complete the line. These extras will be stored in storage tanks at Suva, to be used for emergencies and repairing faith in the great expansion of The Iris, another cable ship recently hunched in England, will be used as a repair ship, with headquarters at Suva, where she is expected to arrive before the Anglia gets there with the connecting section of the cable. The Colonia is the largest and best equipped cable ship afloat, having a registry of 8,000 tons, while the Anglia is 6,000 tons. The Iris is a smaller vesel, built expressly for the work of repairing.

There are several cable constructing executed.

Mr. Cunningham expresses strong faith in the great expansion of fruit growing in British Columbia. The market which rightfully belongs to this province is practically unlimited, Manitoba and the Territories filling up more rapidly than we can grow the fruit that those people need and will have. If the growers will only exercise due caution in shipping only sound, well-packed fruit

New York, Sept. 9.—A judgment for \$4.084,000 in favor of Chas. B. Brown, was
entered today in an action brought by him
in the supreme court against the Memphls,
El Paso and Pacific Railway company,
Brown claimed to be the owner of 1.667
bonds of the defendant company, valued at
\$1,000 each, which were issued in 1867. The
bonds when they reached maturity, were
not paid, and Brown sued to recover their
value with costs of the suit and the interest, which had accumulated on the bonds.

U. S. ARTILLERY.

None of Field Guns Tested Accepted Yet. Washington, D. C., Sept. 9.—The board of ordinance and fortifications today considered the reports on the field guns which have been tested with a view of selecting a gun for the United States field artillery. The board did not accept any type, as all submitted developed certain defects, which it was decided the designers should have opportunity to correct. Four months will be allowed for this purpose.

COAL LANDS. Explorations on North Fork of Kettle

River.

Grand Forks, B. C., Sept. 9.—T. M. Rixen, of Nelson, B. C., has returned in here after spending a month in prospecting the coal lands of the British Columbia Coal company on the North Fork of the Kettle river, six miles north of Grand Forks. He reports that in the course of development work a seam of bituminous or coking coal six feet wide was uncovered. The expert now on the ground will report favorably on the commercial importance of the coal fields in will return there shortly with small diamond drill plant and operations will be carried on permanently.

Baird-Soule.—Mr. Thomas Miller

Baird-Soule.—Mr. Thomas Miller Baird, of Port Renfrew, was yesterday married to Miss Anne Soule, daughter or Mr. C. J. Soule, of this city. The ceremony was performed by Rev. W. Leslie Clay at the residence of the bride's father, only intimate friends and the members of the family being present. NMiss Ethel Soule was bridesmaid and Mr. Ernest Campbell acted as best man. The honeymoon will be spent on the Sound, and afterwards Mr. and Mrs. Baird will make their home at Port Renfrew.

Work Completed.—The last block in the Government street paving was laid the ranches along the water front.

It is a remarkable fact that when the prairies nown as memories some clear and definite statement by Colonel Prior on the subject in count will be mills be

Latest Report **On Ymir Mines**

Over 100,000 Tons of \$7.50 Ore Now Blocked

view of the rumors which has been current for the past two months, it is pleasant to learn that Mr. Hooper's report is reassuring. It is enclosed in a circular letter from

the main features of the report are touched upon, as fellows:

Dealing with the development at the mine and the appearance of the property, Mr. Hooper says:

"The vein has been proved from the surface to a vertical depth of about 1,000 feet, the payable portion varying from 2½ feet to 42 feet in width.

The length of the pay chute at No. 1 level was about 440 feet; at No. 2 level the lateral extent of the vein worked by the stopes increased to 470 feet, but at No. 3 level the chute shortens to about 350 feet, and at No. 4 level the payable ore is only found, so far, to have a length of about 200 feet, although the assays for the last 76 feet of the west drift (which is not included in above measurement) would seem to denote that a certain amount of ore exists between that distance. The Hmits of the pay chute at No. 5 level have not as yet been fully determined, though present appearances indicate a decided tendency for it to pitch to the eastward, and a length of about 120 feet on this level, east of the shaft, has been proved to be payable.

At levels Nos. 6, 7, and 10, no amount

At levels Nos. 6, 7, and 10, no amount of payable ore has yet been found, and all work at these-points is suspended until connection has been made with the main shaft of level No. 10. This last-mentioned work is of great importance with regard to the extraction of ore-below No. 3 level.

The presence of bunches or seams of zinc-thende, galena or iron pyrites in the quartz has hitherto been regarded as the chief indication of the presence of sufficient gold and silver in the ore to render it payable. That the occurrence of these minerals in the ore is no criterion as to the accompanying precriterion as to the accompanying pre-cious metals, is sufficiently borne on by the recent developments in No. 16

The concentrates shipped to the smelters from the commencement of operations by the company to 31st December, 1901, contained the average of 1.01 oz. of gold and 12.22 oz. of silver per ton, and over 20 per cent. of lead.

Cyanide operations commenced in March last, and up to the 30th June, 11,126 tons of tailings had been treated. According to the assays of the tailings and residues about \$35 oz. of gold annu 3,116 oz. of silver have been saved theoretically, although the actual results, which are not yet obtainable, will undoubtedly be considerably less.

The operation of cyaniding has naturally been attended at the outset with many minor difficulties, and the average cost per ton of the tailings treated,

Total amount ore blocked out 106,363

In calculating the above-mentioned quantities, an allowance of from 10 oer cent. to 30 per cent. has been made for the waste or poor rock, which should be eliminated from the ore before being sent to the mill.

The ore blocked out can safely be computed to have a value of \$7.50 per tou, and should, by the aid of further development work at No. 6 level, and possibly also at No. 7 level, be considerably augmented, although it cannot be denied that the work done at Nos. 4 and 5 levels points to a shortening of the chute in depth, but whether this is of local occurrence or not, future developments must show.

The total gross product and value of

British Columbia Vein is improving on the One Thousand Foot Level.

course metals, is sufficiently borne out by the recent developments in No. 10 level, where the quartz carries about the same quantity of sulphurets, and a selected sample taken here gave a value of \$7.51, which is a higher result than any hitherto obtained. This is undoubtedly a favorable indication and coupled with the fact that the pay chure in the upper levels has shown a decided tendency to pitch to the east, gives one the intendency to pitch to the east, gives one this level to the eastward.

The ore is chiefly composed of quartz, with which is associated about 8 to 10 per cent. of sulphurets of lead, iron and zinc. The gold evidently occurs for the most part in a free state, over 60 per cent. being saved by amalgamation in the stamp mill, and about 15 per cent. by concentration over the vanners, the fat tailings being about \$1.75 per ton of ore treated.

The oncentrates shipped to the smelters from the commencement of operations by the commany to 31st Delay.

Broken lots, and where there are solved in the same function of the commencement of operations by the commany to 31st Delay.

Broken lots, and where there are solved in the same function and a selected sample taken here gave a value of \$7.51, which is a sundany hitherto obtained. This is undoubtedly a favorable indication and coupled with the fact that the pay chure in the upper levels has shown a decided tendency to pitch to the east, gives one very encouragement for continuing this level to the east, gives one selected smple taken here gave a value of \$7.51, which is about \$1.00 and \$1.0

church goung.

The total gross product and value of the ments must show the church of the statements A and set found it will be seen that the average gross will be set from during 1902. Thus, the case of the carbon and shipment to desire the seed of the carbon and shipment to desire the seed of the seed o will tell my brother (cousin) the Emperor of my pleasant meeting with you. The Emperor is well aware of the importance of the work being done by you as members of the Chinese Empire Reform association, and he is in full sympathy with the work. He has however in the administration of the affairs of state to submit to the guiding of his ministers of state, and time would be necessary before all would see alike as to the reforms that should be adopted. I have great hopes of the young men who are stream word coming to the front in public affairs. It was important that the young men should get a thorough training in Occidental ways, systems and customs and that they become masters of the different sciences. I would suggest that the delegates of the Reform association present should exhort their fellow-countrymen in British Columbia to be law-abiding citizens of the country

THE AGE OF BRAIN WORK.

"In these days, half our disease confrom the neglect of the body in the overwork of the brain. In this railway age the wear and tear of labor and intellect go of without pause or self-pity. We live longer than our forefathers, but we suffer more They fatigued only the muscles, we exhaus the finer strength of the nerves." Drase's Nerve Food is the greatest medicing this age because it is best suited to the needs of the present day. It restores an revitalizes waste nerve cells and makes the pale, weak and exhausted strong and healthy and vigorous.
