Having now concluded my remarks on these islands and people, I shall take my final leave of them, after giving some account of the astronomical and nautical observations that were made during our stay.

And first I must take notice, that the difference of longitude between Annamooka and Tongataboo, is somewhat less than was marked in the chart and narrative of my last voyage. This error might easily arise, as the longitude of each was then found without any connection with the other. But now the distance between them is determined to a degree of precision that excludes all possibility of mistake; which the following table will illustrate:

The latitude of the observatory at Tongataboo, by the mean of several observations, - - 21° 8' 19" south.
