

cations therefor—an intimate acquaintance for years with the public and private life of the subject of his sketch, and a graphic skill for painting his pen portrait. So many-sided was this life, through so many channels did it pour its influence, that it is only by looking at it from various aspects, and tracing these various channels, that one gets an adequate idea of its grand symmetry and multifarious activity. Mr. Lathern has therefore adopted the lucid plan of devoting a chapter to each of these aspects and developments, as follows:—Personal Narrative, Professional Distinction, Political Life, The Bench, Lieutenant-Governor, Conversational Charms, Christian Life, Esteem for the Word of God, Church Election, Choir Service, The Sunday School, Sunset. To those who knew the deceased, this volume will be an affecting memorial. To many who knew him not, it will be, we trust, an inspiration to make, like him, their lives sublime. We hope to have, from the pen of his early pastor, the Rev. Dr. Wood, a fuller sketch of this noble life. The Rev. D. Currie gives an admirable introduction, and the book is accompanied by an almost speaking likeness by the artotype process.

*The Science of Life; or, Animal and Vegetable Biology.* By the Rev. J. H. WYTHE, A.M., M.D. Cr. 8vo, pp. 295. New York: Phillips & Hunt; and Methodist Book-Rooms, Toronto, Montreal, and Halifax. Price \$1.50.

We know of no study more fascinating than that of the Science of Life. No subject is coming, year by year, into greater prominence. It discusses some of the profoundest problems in the universe, having the most intimate relations to religion and theology. Nothing so cultivates the seeing eye, the observing mind. It unfolds to the reader a wonder-world all around him, the examination of which is a perpetual delight. This book is thoroughly scientific. It is also thoroughly devout. It gives the latest discoveries and classification, but it does not accept

the unproved assumptions of Spencer and Huxley. We know of no book covering so fully so wide a range in the same space. The numerous illustrations—there are 172—are admirable in execution and of great value in the elucidation of the text. The book has been adopted as one of the course of the Chautauqua Literary and Scientific Circle—an evidence of its high character. Any one who masters it will have truer and nobler conceptions of the world in which we live, and of its vast and varied range of animal and vegetable life, and will be led to exclaim with a profounder appreciation, "O Lord, how manifold are thy works: in wisdom hast thou made them all."

*Gilbert Haven: a Monograph.* By the Rev. E. WENTWORTH, D.D. New York: Phillips & Hunt. pp. 42, with steel portrait. Price 25 cents.

The late Bishop Haven was one of the most remarkable men of the Methodist Episcopal Church. Into few lives have been crowded such versatile and multifarious activities. Into the great enterprises and philanthropies of the Church he threw himself with intense energy. As teacher, as preacher, as editor, as bishop, his life was full and rounded. There must have been a strange personal magnetism about the man, and even his books make you feel that you are talking with a friend. He early became the champion of the slave and the oppressed, and in their service he may be said to have died; for while on a missionary visit to Africa he received the malarial contagion which, aggravated by service in the South, resulted in his death. Dr. Wentworth pays the tribute of a life-long friend and fellow-labourer to his memory. It is a small book, but gives a vivid picture of the man. His death was one of the grandest of which we ever read. "Stand by the coloured man when I am gone," he said; then, "There is no death. There is no river. I am surrounded by angels. I am floating away—away. Victory through the blood of the Lamb."
