some time. It costs something for any man to cut himself off from many friends to work in the loneliness of foreign lands. It costs much for a man with the manifest ability of Mr. Imrie. But we expect much from his work in India.

Good reports have come to us of the work of Henry Procter in the old land. We are pleased, however, to learn that he expects to join the McMaster classes next Fall.

M. C. McLean, '98, has been laboring since graduation in Crystal, North Dakota. The spirit of McMaster is so Canadian that most of her graduates prefer to become a factor in the upholding of Canadian national life, but occasionally one of our number strays over with the work to the south of us. When such takes place we follow with interest the work that is accomplished. Splendid reports have come to us of the work of Mr. McLean. In fact we understand that he has made such an impression upon the people of the part of North Dakota in which he is stationed that they are wondering if McMaster will send them more of the same quality.

AROUND THE HALL.

ATHLETIC ASSOCIATION.—The annual meeting of the Athletic Association, for the purpose of electing officers, was held at 4 o'clock on the 29th. Before the elections began the retiring secretary gave a most encouraging report of the finances of the Society which was received with much enthusiasm. A hearty vote of thanks was tendered him for the creditable and painstaking way in which he had served the Society. As a result of the voting the following officers will have charge of the Athletic Association during the coming year: President, W. E. Robertson; vice president, R. D. McLaurin; secretary treasurer, E. J. Tarr. The newly-elected president outlined his policy in a few words and the other officers made brief speeches of acceptance.

TENNYSONIAN.—At a special meeting of the Tennysonian it was decided to prorogue for a year on account of the action of the Literary Society. Thus an important item in "College News" passes away.

An interesting lecture on Astronomy, illustrated by stereopticon views, was given by Professor McKay a few evenings ago. Although intended chiefly for the graduating year the lecture was much enjoyed by other students who attended.
