“HUMANISED MILK,”

AS PREPARED WITH

PEPTOGENIC MILK POWDER

Is the best food for healthy nursing infants, for the same reason that it is the best food for feeble and ailing infants, because it is identical with mothers' milk. By the Peptogenic Milk Powder and process, cows' milk is so modified and converted as to conform remarkably to average healthy breast milk in physical and chemical properties and in digestibility. Peptogenic Powder does not render the milk unnecessarily or unnaturally easy of digestion; it is simply as digestible as mother's milk. “Humanised Milk” is the only exact and rational substitute for mothers' milk.

Sample of Peptogenic Milk Powder and pamphlet sent gratis, upon request to

FAIRCHILD BROS. & FOSTER,
NEW YORK.
