

Statements by Issue organizes the statements according to the arms control issue being discussed. The major issues discussed in the CD during the 1985-1987 sessions include: a chemical weapons convention, a comprehensive test ban, nuclear disarmament, arms control in outer space, and a radiological weapons convention. The List of Verbatim Statements by Nation organizes the statements by nation. A coded reference is included in this list to indicate the issue being discussed in each statement. These lists will enable the user to easily access all the statements made by a nation or group of nations on a particular issue, all the statements made on a particular issue, or all the statements made by a particular nation on a particular issue.

Note that the verbatim records of the CD are also available as source documents in French and the other official languages of the United Nations.
