

A
NEW SAFETY BICYCLE
BY EASY INSTALMENTS,
2s. 6d. A WEEK.

MASON'S DIAMOND FRAME NO. 1.

A thorough sound piece of mechanism manufactured by the most skilled mechanics from the very best steel procurable; the swiftest, lightest, and most rigid safety on the market.

Special attention has been paid to the position of the saddle and handles, which enables the rider to negotiate any hill, no matter how steep, with the greatest ease, and to economically utilize such natural power as is possessed by the average human being in the propulsion of the cycle.

The handle bar is the only rational one made, and allows an upright position to be maintained instead of the cramped and unnatural posture of the average safety rider. It is easier to learn than any other, owing to the perfect steering, and does not cause the slightest strain on the hands or arms, a great feature being that it can be ridden without the use of the hands.

These facts are verified by competent authorities, and any rider who gives my machines a fair and impartial trial, will admit their efficiency and superiority.

Price £12, and fully equal to many sold at £18. Pneumatic or Cushion tyres fitted if desired at extra cost. Hundreds of unsolicited testimonials. Big discount for cash, or by weekly, monthly, or quarterly instalments.
