NERVOUS DEBILITY

Thousands of young and middle-aged men are annually swept to a premature grave through Early Indiscretions, Excesses and Blood Diseases. If you have any of the following symptoms consult us before it is too late. Are you nervous and weak, dependent and gloomy, speckle before the eyes, with dark circles under them, weak back, kidneys irritable, palpitation of the heart, nervousness, bashfulness and depression, pimples on the face, eyes sunken, hollow cheeks, careworn expression, poor memory, listless, dissatisfied, lack energy and strength, tired mornings, restless nights, changeable moods, weak manhood, premature decay, bone pains, hair loose, sore throat, etc.

Our New Method Treatment can cure you and make a man of you. Under its influence the brain becomes active, the blood purified, so that all pimples, blotches and ulcers disappear, the nerves become strong as steel, so that nervousness, bashfulness and depression vanish, the eye becomes bright, the face full and clear, energy returns to the body and the moral, physical and sexual systems are invigorated; all drains cease—no more vital waste from the system. Don't let quacks and fakirs rob you of your hard earned dollars. We will cure you or no pay.

will cover 300 or more square feet of surface in average condition, two coats to the gallon. Every gallon is a full U. S. standard measure. It is made to Paint Buildings with. It is the best and most durable House Paint made.

KARLEY & PURCELL

Glass, Putty Oils and Varnishes, Brushes, all kinds of Tools for Workshop, Field and garden.

VENTILATION

How the Northwest Has Solved the Fresh Air Problem.

The Canadian Northwest has solved the ventilation problem—solved it in the simplicity of 1, 2, 3, says Lila E. Clendenen in The Globe.

The name of the particular individual who first applied this method does not appear to be generally known. In all probability he was some Scotchman in the employ of the Hudson's Bay Co.

Having built his log shack, he cut a space for light. The mud-and-stone or mud-and-pole fireplace came next. After chinking the inside of the shack with moss, there would be plenty of time for mudding it during the autumn, when mud holds to the logs.

But some cool night as the embers died on the hearth and the wind rushed and whirled through the lighting space the pioneer was chilled out of his dreams. Drawing his warm four-point blanket about him he would wonder: "How shall I keep that draught out in cold weather?" Bright and fertile-brained with the morning, he picked up an empty unwashed flour bag or a piece of white cotton—it must have been the former, for he set the pace—and nailed it over the space with hand-beaten nails.

The flour-bag window has been in use in the north country for years. Many half-breeds and some Indians have used it with very satisfactory results as to health in their families. Indeed, there is nothing will kill the Indian quicker than unventilated housing. Alternately feasted and starved, sunned and exposed, as game and weather hall the native, fresh air is an imperative necessity to his existence.

How can this system be adopted to the city house? We have all used wire screens. Why not use white or green cotton screens when the wires are discarded for autumn and winter? These could be made on the same sliding principle. For sleeping rooms they are particularly to be recommended, as they can be placed in the window at night and shut out in the morning if desired. In an emergency tack or throw factory cheese cotton over the wire screen and fit it back into the window.

There are many rooms which would be the better of a permanent cloth screen. With all the fabrics of coarse and fine mesh displayed in the stores, the handy man or the handy woman need not require long to make an investment which will add years to his or her life, and right here and now increase mental alertness and general health.

Think of the ill-ventilated churches, schools theatres and other public buildings. Think of the annoyance, discomfort, illness and death resulting from icy draughts on perspiring people.

The cotton screen—preferably placed at the top of the window—modifies the danger and admits pure air. The janitor's objection to "heating all outdoors" is overcome.

Until such time as perfect ventilation is established in every home, church, theatre, office, factory, store and stable, the flour-bag system will if used prove invaluable in building red corpuscles into young Canadians' blood.

Dry Farming Congress.

Announcement has lately been made of the seventh international dry farming congress, which is to be held at Lethbridge, Alberta, Canada, Oct. 21-26 next. This movement had a small beginning several years ago. In the coming congress representatives are expected from every nation in which dry farming is practiced, and this refers particularly to western Canada and the dozen or more western states in which the production of cereals has been greatly increased through the adoption of dry farming methods. In the several days given to the convention there will be conferences on soils, tillage methods and machinery, crops and crop breeding, agricultural education, farm management, scientific research, agricultural colleges and experiment stations, while one of the most interesting features of the congress will be a special section whose discussions will be devoted to the interests and problems of farm women. Interest in the congress is being increased through the offering of substantial prizes for best exhibits of farm products and for the best articles treating of various phases of farm problems.

Wealth Underground.

Captain James, of the Canadian exploration party aboard Captain Bernier's "Arctic," tells of virgin forests beneath ground in Baffin's Land—the richest coal areas in the world, and fuel can be dug up with a shovel.

Captain James is of the belief that the two largest coal fields in the world have been discovered in Canadian soil, located in Baffin's Land. The two are about one hundred miles apart. In spite of their high altitude, he says that they will be workable all the year round. The coal is so easily secured that it can be dug from the surface with the shovel.

"This northern part of Canada will be the greatest country in the world," says Captain James. "I believe that the report of the Arctic's last voyage, when it is made public, will be of great value."

Demonstration Farms.

The Dominion Commission of Conservation has established a number of demonstration farms throughout Canada for the purpose of instructing agriculturists how they may get the best results in the most economic manner. They are under direction of John Fixter, formerly of Macdonald College, and C. Nunnick, agricultural expert. In Ontario eight farms have been leased, in Quebec six, and in the Maritime Provinces three each. Arrangements are being made for similar demonstrations in the west.

Firmness of Purpose.

Firmness of purpose is one of the most necessary sinews of character and one of the best instruments of success. Without it genius wastes its efforts in a mass of inconsistencies.—Chesterfield.

LADY FRANKLIN'S ADDRESS

Explorer's Wife Received a Flowery Welcome at Yale, B.C.

In a communication to The Week of Victoria, Mr. John T. Walbran tells an interesting story of Lady Franklin's visit to the British Columbia coast more than half a century ago:

On Vancouver Island and on the south shore of Johnstone Strait is a steep and rugged range of mountains about 4,000 feet high, named by Captain Richards, in 1861, then in command of H.M. surveying vessel "Hecate," after Sir John Franklin, the Arctic explorer, and Lady Jane Franklin, his wife.

It was on the 22nd February, 1861, that Lady Franklin, then the widow of the gallant sailor, accompanied by her niece, Miss Sophia Cracroft (hence Cracroft Island and on it Sophia Point, situated on the opposite side of the strait to the Franklin Mountains), arrived at Victoria on a visit. In March, attended by Lieutenant Hankin of H.M.S. "Hecate," detailed by Capt. Richards for this duty, proceeded by river steamer up the Fraser as far as Fort Yale, as her ladyship desired to see something of the scenery on the river. At Yale, Lady Franklin was enthusiastically welcomed and on leaving was presented with an address. This unique address which has, to the writer's knowledge, never before been published, is worthy of more than passing mention and was communicated to the writer by her ladyship's naval aide-de-camp who was present when it was read to Lady Franklin.

The address, as follows, was read by the Rev. William Burton Crickmer, I.A., then the Anglican clergyman at Yale, and no doubt the reverend gentleman had a large share in its composition:

"May I please your ladyship. We the inhabitants of Yale representing well nigh every nation under heaven, esteem the present as the proudest moment in the annals of our country and in the existence of our Town.

To-day is our Town of Yale forever linked in history with the name of one, the memorial of whose abundant kindness and wisely devotion will never die and at whose immortal veneration Princes bow down and Kings and Queens of the Earth may envy but never win.

"From the bottom of our hearts do we pray God to bless your ladyship with many happy days, and when called in God's own providence from this holy Church militant, to join the heroic in the Church triumphant, may the grave be transmuted, by the touch of a living faith, into the gates of everlasting life and a glory more lasting than the perishing Laurels of Earth, forever crown the double brows of the noble pair whom the whole civilized world of Christendom delighted to honor."

History has not recorded Lady Franklin's reply. The address, engraved on parchment, was placed in a small cedar-wood case and handed to her ladyship.

On returning to Victoria a picnic was organized by the city authorities, etc., to the head of the Victoria Arm and was held on the 21st March when the canoe carrying her ladyship was manned by eight Canadian boatmen in costume. On the 24th, Lady Franklin and her niece left Esquimaux for England, via the Sandwich Islands and Australia, in the steamer Panama, to the strains of Auld Lang Syne played by the band of H.M.S. Topaze.

The address was given to the writer, long after these days, by Commander Hankin, R.N., when nearly all interested parties had passed away, and this gentleman had also told the writer that often on board the Hecate, at the captain's dining table, over the walnuts and the wine, Capt. Richards, smiling around at his guests, would say: "Now Hankin give us the address to Lady Franklin." Commander Hankin laughingly finished by saying, "When, of course, being my superior officer, there was nothing else for me to do but get up and obey."

The Englishman in Ontario.

"Is the labor problem of western Ontario to be settled by the Englishman?" says a Glencoe, Ont., man. "The present indications point in that direction. A few years ago you could find very few English immigrants in West Middlesex, and only a family or two in Glencoe. To-day you meet fine, intelligent men from the better classes of old England almost everywhere. Among the newer arrivals are mechanics and artisans—men who are proving themselves good citizens."

This opinion represents the experience of many towns and cities in western Ontario, says The London Free Press. There is an immigration into these parts of men from the old land going on to-day that is even more marked than was the immigration which resulted in the settlement of Ontario in large part by this same class of immigrant now approaching a century ago.

Peat Branch Supply.

The Mines Branch of the Government Department of Mines recently announced that its demonstration of the commercial possibilities of peat as a fuel in Canada had been successfully completed, and that henceforth the activities of the branch would be applied in another direction, probably the economic production and testing of fuel, concerning which the department already has a man in the west.

The peat industry in Canada will now become a matter of private enterprise. There are two big plants under construction, one at Alfred, Ont., and another at Burnham, Que., which are expected to supply Ottawa and Montreal and possibly other cities with cheap fuel. Their capacity is about 30,000 tons per year.

Wealthy Settlers.

The wealth of the immigrants settling in the west during the five years ended March 31 was estimated as follows: British, cash, \$37,846; effects, \$18,773,000. United States, cash, \$187,260,000; effects, \$110,922,000.

New Year Term

The New Year term of The Brockville Business College will open Jan. 6th 1913. Our Book-keeping, Stenography and General Office Work courses are particularly adapted to the present day commercial world demands. Our Farmers' Sons' short Winter course is especially adopted to the needs of the young farmer, who may have a very meagre education, yet who is anxious to get enough education to enable him to handle more efficiently the business side of farming. Send for free catalogue.
